1.0 Introduction

1.1 Instructions

- 1.1.1 This Transport Assessment has been prepared from instructions received from Manor Oak Homes.
- 1.1.2 The report has been prepared to support the submission of an outline planning application.
- 1.1.3 The benefit of this report is to our instructing Client.

1.2 Site Location

- 1.2.1 The proposed residential development is located at land between Hookhams Lane and Ravensden Road, Ralph End, as shown in Figure 1.1 below and enclosed in Appendix A. The approximate National Grid Reference for the site is E507519 N252820.

Figure 1.1: Site Location Plan

1.3 Current Use and Description

- 1.3.1 The site currently comprises agricultural land there has been no previous development on the site.

1.4 Proposed Development

- 1.4.1 The proposed development will comprise up to 400 residential dwellings and a two-form entry primary school, up to 420 pupils.

1.5 Revision Record

- 1.5.1 Revision A of the report has been prepared in response to Bedford Borough Council as Local Highway Authority objection to the first issue of the Transport Assessment. The report has undergone various changes and should be read in whole as a new document.

2.0 Existing Conditions – Site Information

2.1 Site Location

- 2.1.1 The proposed residential development is located at land between Hookhams Lane and Ravensden Road, Salph End.

2.2 Permitted Use

- 2.2.1 There has been no previous development on the site. The site is currently an agricultural field. The existing site is shown on the topographical survey enclosed in Appendix B.

2.3 Neighbouring Land Uses

- 2.3.1 The neighbouring land uses are a children's nursery and area of woodland to the north, Ravensden Road and properties fronting this road to the east, properties on Home Close and Hookhams Lane to southeast, the Mark Rutherford secondary school to the south and Mowsbury Golf Course to the west.
- 2.3.2 We are aware of an undecided planning application on land to the south of the site which includes 27 Hookhams Lane for 14 dwellings, planning reference 18/02496/MAF. Between submission of the Transport Assessment and Revision A of the document this planning application has been refused.

2.4 Existing Access Arrangements

- 2.4.1 The existing site is accessed via a field access off Ravensden Road.

3.0 Existing Conditions – Baseline Transport Data

3.1 Walking and Cycling

- 3.1.1 Hookhams Lane is bound by footways on both sides of the carriageway which are approximately 1.5m wide. Home Close is bound by footways on both sides of the carriageway which are approximately 1.8m wide. Ravensden Road is bound by a single footway of approximately 1.2m wide on the western side of the carriageway. Footways on Hookhams Lane are separated from the carriageway by a grass verge.
- 3.1.2 The existing site has three Public Rights of Way (PROW) running through the site. The PROWs will be maintained through the site post development.
- 3.1.3 Footways within the vicinity of the site generally have dropped kerbs at the appropriate locations.
- 3.1.4 There are no dedicated cycling facilities within the vicinity of the site.
- 3.1.5 Walking and cycling distances to key local facilities is set out on the plan enclosed in Appendix D. The plan also shows the proximity of the site to key facilities including: schools, health services, shops etc. The suitability of the walking distance shown on the drawing is based on the guidance described in full below. Cycle journeys are generally considered acceptable if the distance is less than 5km.
- 3.1.6 In 2000 the Institution of Highways and Transportation published the document ‘Providing for Journeys on Foot’. This document states that:

“80% of walk journeys and walk stages in urban areas are less than one mile. The average length of a walk journey is one kilometre (0.6 miles). This differs little by age or sex and has remained constant since 1975/76.”

It goes on to define an average walking speed thus:

“An average walking speed of approximately 1.4 m/s can be assumed, which equates to approximately 400m in five minutes or three miles per hour.”

- 3.1.7 Within the document:
- “Table 3.2 contains suggested acceptable walking distances, for pedestrians without a mobility impairment for some common facilities. These may be used for planning and evaluation purposes.”*

Table 3.2 is replicated below as Table 3.1. Predicted journey times have been added to distances based on the 1.4m/s walking pace.

Table 3.1: Suggested Walking Distances - IHT 'Providing for Journeys on Foot'

| Town Centres | | Commuting / School / Sight-seeing | | Elsewhere | | |
|-------------------|----------|-----------------------------------|----------|-----------|----------|---------|
| | Distance | Time | Distance | Time | Distance | |
| Desirable | 200m | 2m 23s | 500m | 5m 57s | 400m | 4m 46s |
| Acceptable | 400m | 4m 46s | 1000m | 11m 54s | 800m | 9m 32s |
| Preferred Maximum | 800m | 9m 32s | 2000m | 23m 48s | 1200m | 14m 17s |

3.2 Public Transport

Bus

- 3.2.1 The nearest bus stops are located on Hookhams Lane approximately 100m from the site's proposed access on Hookhams Lane. The bus stop is located within a 1-2 minute walk from the development site's access off Hookhams Lane. The bus stops serve the bus routes described in Table 3.2 below. Full timetables are enclosed in Appendix E.

Table 3.2: Bus Services and Frequencies

| Route No. | Route | Typical Frequency | | |
|-----------|--|-------------------------|-------------------------|------------|
| | | Mon - Fri | Sat | Sun |
| 27 | Bedford - Cople - Willington - Great Barford - Renhold - Bedford | ~0800-1500 5 per day | ~0800-1500 4 per day | No service |
| 27 | Bedford - Renhold - Great Barford - Willington - Cople - Bedford | ~1000-1745 4 per day | ~1000-1600 3 per day | No service |

- 3.2.2 The number 27 bus service provides occasional services to Bedford and surrounding villages. This would allow residents of the development to commute to work in Bedford and connect with additional services in Bedford.

Rail

- 3.2.3 The nearest railway station is Bedford St Johns. The railway station is located on the Marston Vale line between Bletchley and Bedford. The station is served by hourly trains to Bedford and Bletchley.
- 3.2.4 Bedford St Johns railway station is located approximately 6.1km (3.8miles) from the northern site's access to Hookhams Lane.

3.3 Highway network

- 3.3.1 The proposed development is accessed off Hookhams Lane and Ravensden Road with the characteristics as set out in Table 3.1 below. The proximity of the site in relation to the wider highway network can be seen on the plan enclosed within Appendix D.

Table 3.3: Thenford characteristics

| Characteristic | Hookhams Lane | Ravensden Road |
|---------------------|--|--|
| Road classification | Unclassified | Unclassified |
| Carriageway Width | Approx. 5.5m wide | Approx. 5.5m wide |
| Footways: | Both sides approx. 1.5m wide | Approx. 1.2m wide western side only |
| Cycleways | None | None |
| Speed limit | 30mph | 30mph |
| Other features | Where footways exist street lit with tactile paving and dropped kerbs at appropriate locations | Where footways exist street lit with tactile paving and dropped kerbs at appropriate locations |

3.4 Accident Data

- 3.4.1 Accident data has been obtained from the local highway authority. The first issue of the Transport Assessment included an accident search comprising Ravensden Road, Hookhams Lane and the Norse Road roundabout. This data covered the most recent 5 year period available at the time from 19 May 2014 to 18 May 2019-. A copy of the accident data is enclosed in Appendix F.
- 3.4.2 This showed that there had been no accidents on Hookhams Lane or Ravensden Road during this 5 year period.
- 3.4.3 At Junction 1 Hookhams Lane / Norse Road roundabout there have been two recorded slight accidents and one serious accident. One slight accident occurred on Hookhams Lane, the other on the circulatory carriageway whilst the serious accident occurred on the Norse Road arm of the roundabout. A review of the basic facts does not identify any common course for the accidents.
- 3.4.4 Accident data for the remaining junctions was obtained at a later date at the request of Bedford Borough Council. This accident data covers the period 10 October 2014 to 9 October 2019.
- 3.4.5 At Junction 2 Wentworth Drive / Putnoe Lane there have been three recorded slight accidents. One slight accident occurred on Wentworth Road east arm with two accidents recorded on the circulatory carriageway. A review of the basic facts shows that all three accidents occurred under different circumstances.

- 3.4.6 At Junction 3 A4280 St Neots Road / A4280 Goldington Road / Norse Road there have been no recorded accidents. On the Goldington Road approach there has been a single accident. As there is only a single accident no patterns have been formed to suggest there is a significant accident issue at the junction.
- 3.4.7 At Junction 4 A421 / St Neots Road / A4280 northern roundabout there are five recorded slight injury accidents. Four of which have occurred on the A4280 arm, three of which involved some form of slight collisions with cars on the opposite carriageway and a fourth involved a broken-down vehicle with police in attendance. Whilst there are three accidents which result in a broadly similar accident they are of such a low frequency with enough differences to not form a pattern.
- 3.4.8 At Junction 4 A421 / St Neots Road / A4280 southern roundabout there are three recorded slight injury accidents all occurring on or near the A421 off slip. All three accidents are shut type. Three shunt accidents at a junction of this type is not unexpected.
- 3.4.9 At Junction 5 Ravensden Rd / Oldways Rd / Church End there have been two recorded slight injury accidents and a single serious accident. Two accidents, including the serious accident, involved vehicles waiting to turn right onto Church End and failing to see an approaching vehicle. Whilst the third accident involved someone turning right from Church End and again failing to see a vehicle. The type of accidents are as would be expected with a junction of this type in this location. The proposed development is not expected to result in a significant adverse impact.
- 3.4.10 At Junction 6 B660 / Oldways Rd / Thurleigh Rd there were no recorded accidents.
- 3.4.11 The accident data review has not identified any areas of concern. Therefore, the proposed development is not expected to have an adverse impact on the operation safety of the local junctions.

3.5 Accessibility to Education

- 3.5.1 The proposed development will incorporate a primary school, so will be within a desirable walking distance of the school. The vast majority of residents on the site would utilise this school.
- 3.5.2 Existing primary schools are located in Renhold (Renhold VC Primary School, Church End) and Ravensden (Ravensden Primary School, Church End) these are located d1.5km and 1.9km from the nearest access so are within the preferred maximum walking distance for education.
- 3.5.3 To access Renhold Primary School on foot there is at least single sided footway provision between the site and the primary school. However, there is not a complete footway connecting the site and Ravensden Primary School. Given that Ravensden School is located further from the site than the proposed school and the school in Renhold, there is likely to be very limited demand from the site to Ravensden School.

- 3.5.4 The nearest secondary school, Mark Rutherford School, is located in Bedford, approximately 1.1km from the proposed development access on Hookhams Lane. The secondary school is located within the preferred maximum walking distance for education and is within an acceptable cycling distance from the proposed development. There is adequate footway provision adjacent to the highways connecting the development site with school. There are also Public Rights of Way which could shorten the walking distance, this would offer a seasonal weather dependent route to the school.
- 3.5.5 The nearest nursery (Little Steps Day Care, Ravensden Road) is located immediately to the north of the development site. This is located within a short walking distance of the site.

3.6 Accessibility to Health

- 3.6.1 The nearest doctors' surgery, dentist and Pharmacy are all located at Goldington Square on Church Lane. These services are all located approximately 1.0km (0.6 mile) from the proposed development. The location of the doctors' is within an acceptable walking and cycling distance of the proposed development.

3.7 Accessibility to Retail and Leisure

- 3.7.1 There is a post office and convenience store near the site's access on Hookhams Lane. Additional retail and leisure services can be reached by bus and on bike in Bedford.
- 3.7.2 Renhold Village Hall is located approximately 1.2km from the proposed development and is accessible via a footway.

3.8 Accessibility to Employment

- 3.8.1 Employment opportunities can be reached by bus and on bike in Bedford.

3.9 Summary

- 3.9.1 The proposed development is shown to adequately served for pedestrian, cyclist and public transport infrastructure.
- 3.9.2 The footway provision between the development and the local facilities is adequate for purpose and would allow pedestrians of the development to access the local facilities. From our desktop review of the existing pedestrian facilities we are not aware of any deficiencies in the footway network which would prevent or significantly reduce the likelihood of residents walking to / from the development site.
- 3.9.3 A review of the accident data shows that there is not an accident data on the highway network within the vicinity of the proposed development site.

4.0 Policy Review

4.1 Introduction

- 4.1.1 The following section of the report provides an examination of current policies relating to transport at national and local level as they relate to the proposed development.

4.2 National Policy

- 4.2.1 Creating Growth, Cutting Carbon: Making Sustainable Local Transport Happen, The Transport White Paper was published in January 2011 by the Coalition Government. The Document outlines a vision ‘for a transport system that is an engine for economic growth, but one that is also greener and safer and improves quality of life in our communities.’ Consequently, reducing carbon emissions derived from transport together with generating economic growth and contributing to economic vitality. The Localism Agenda is another strong theme with the White Paper supporting local solutions that are tailored to specific needs and behaviour patterns to deliver effective local transport.
- 4.2.2 The priority for local transport, as outlined is to “encourage sustainable local travel and economic growth by making public transport and cycling and walking more attractive and effective, promoting lower carbon transport and tackling local road congestion”.
- 4.2.3 The White Paper Chapter 4 is titled Enabling Sustainable Transport Choices. The chapter states that ‘the Government wants to encourage and enable more sustainable transport choices’. The document goes on to explain the “nudge” concept that taps into human behavioural tendencies to encourage “good” choices. Nudge interventions are described as being easy and not forbidding choice and travel planning is listed as an example of such.

4.3 National Planning Policy Framework

- 4.3.1 In March 2012, the National Planning Policy Framework (NPPF) was published by the coalition government with its overarching principle being a ‘presumption in favour of sustainable development.’ The policies contained within the NPPF applied with immediate effect and thereby replaced, amongst other PPS’s and PPG’s, PPG 13 ‘Transport’. Section 4 of the NPPF ‘Promoting sustainable transport’ covers the transport policy, detailed below are the policies that are of relevance.
- 4.3.2 In paragraph 29, the NPPF acknowledges that ‘transport policies have an important role to play in facilitating sustainable development but also in contributing to wider sustainability and health objectives’ and goes on to say ‘the transport system needs to be balanced in favour of sustainable transport modes, giving people a real choice about how they travel’.
- 4.3.3 Paragraph 36 states that ‘All developments which generates significant amounts of movement should be required to provide a Travel Plan’.

- 4.3.4 Paragraph 38 states 'Where practical, particularly within large scale developments, key facilities such as primary schools and local shops should be located within walking distance of most properties'

5.0 Proposed Development

5.1 Type and Scale

5.1.1 The proposed development will comprise up to 400 residential dwellings and a two-form entry primary school, up to 420 pupils. The proposed development layout is shown on the plan enclosed in Appendix C.

5.2 Access – all modes

5.2.1 It is proposed that the development will be principally accessed off Hookhams Lane via a new all movements access through 25 Hookhams Lane, this access is shown in Appendix G.

5.2.2 The Hookhams Lane access must have regard to the adjacent planning application at 27 Hookhams Lane for 14 dwellings, planning reference 18/02496/MAF. Following submission of this TA the planning application was refused on 20 December 2019, however, it is possible that the applicant may appeal. Therefore, this Transport Assessment also considers the possible access arrangements should the development be subsequently approved.

5.2.3 The proposed access assuming no adjacent development is approved has been subject to a Stage 1 Road Safety Audit (RSA). This scenario 1 RSA, enclosed in Appendix W, did not raise any significant concerns which could not be addressed at detailed design stage.

5.2.4 A further RSA considered the proposed access assuming the adjacent development was approved, scenario 2. A drawing showing this arrangement and the RSA are enclosed in Appendix X with a copy of the RSA enclosed in Appendix Y. This RSA raised as 'problem 2.1' the issue of potential collisions due to the misinterpretation of signals of other approaching vehicles. The auditors recommended that the two access should be rationalised into a single access.

5.2.5 It has not been possible for the adjacent developers to come to an agreement which would see the access rationalised into a single access. Therefore, to overcome the identified problem in the RSA for scenario 2 it is proposed that should the adjacent development be approved that the Hookhams Lane access becomes an egress only. A drawing showing an egress only proposal is enclosed in Appendix Z. A RSA of this arrangement (scenario 3) has been instructed and the results are awaited.

5.2.6 To clarify should the adjacent development at 27 Hookhams Lane be not proceed then an all movements access will be provided. Should planning be granted for development at 277 Hookhams Lane then an egress only access will be provided.

5.2.7 A secondary access will be provided off Ravensden Road, as shown on the drawing enclosed in Appendix H.

- 5.2.8 A spine road, with a width of 6.25m, will connect both accesses on Hookhams Lane and Ravensden Road making this a suitable route for use by buses. Other adoptable roads within the development site will be constructed inline with the current design standards but will typically comprise 5.5m wide carriageway with 2 no. 2m wide footways for non-shared surfaces.
- 5.2.9 In addition, the spine road will also provide a 3.5m wide shared footway / cycleway within the development site.
- 5.2.10 Visibility splay requirements within Bedford Borough are 43m for a recorded speed of 30mph or 90m where no speed surveys have been undertaken. This development undertook speed surveys in June 2017, however, these are not compliant with Bedford Borough Council's current requirements. Speed surveys were undertaken on Hookhams Lane for the adjacent development at 274 Hookhams Lane, these recorded speeds of 28mph consistent with the appropriate use of 43m visibility splays as shown on the access drawing. As no up to date speed data is available for Ravensden Road a worst case assessment will be undertaken, therefore 90m visibility splays are shown on the access drawing.

5.3 Parking

- 5.3.1 Parking within the development will be provided in line with current Bedfordshire Borough Council guidance at the time of a full or reserved matters planning application.

5.4 Trip Generation

- 5.4.1 Person and vehicle trip rates have been obtained from the TRICS database. The person trip selection criteria is set out in Table 5.1 below. The full TRICS data is enclosed in Appendix I.

Table 5.1: TRICS Parameters

| Parameter | Selection |
|---------------|--------------------------------------|
| Version | 7.6.1 |
| Main land use | 03 – Residential |
| Sub land use | A – Houses Privately Owned |
| Regions | All of England except Greater London |
| Locations | Suburban area, edge of town |

- 5.4.2 From the TRICS database the predicted person trip rates are set out in Table 5.2 below.

Table 5.2: Person & Vehicle Trip Rates - Mean

| Use | Morning Peak (0800-0900) | | | Afternoon Peak (1700-1800) | | |
|-----------|--------------------------|-------|-------|----------------------------|-------|-------|
| | Arr | Dep | Total | Arr | Dep | Total |
| Dwellings | | | | | | |
| Person | 0.192 | 0.765 | 0.957 | 0.585 | 0.258 | 0.843 |
| Per dwell | | | | | | |
| School | | | | | | |
| Vehicle | 0.324 | 0.245 | 0.569 | 0.026 | 0.037 | 0.063 |
| Per pupil | | | | | | |

- 5.4.3 To understand the number of trips generated by the residential aspect of the development by mode we need to establish the likely modal split for a development in this location. The 2011 Census includes the ‘Method of Travel to Work’ (MTW) dataset which defines mode choice for all local authority wards. MTW data has been extracted from the 2011 Census for the Great Barford ward which includes the development site. The ‘Method of Travel to Work’ data is summarised in Table 5.3 below.

Table 5.3: Method of Travel to Work - 2011 Census – Great Barford ward

| Mode | Number | Proportion |
|------------------------------|--------|------------|
| Driving a car or van | 2,777 | 85.6% |
| Passenger in a car or van | 146 | 4.5% |
| On foot | 146 | 4.5% |
| Bus, minibus or coach | 95 | 2.9% |
| Bicycle | 57 | 1.8% |
| Motorcycle, scooter or moped | 22 | 0.7% |

- 5.4.4 Using the above mode splits (Table 5.3) it is possible to calculate the predicted number of residential trips generated by each mode. The proposed trips by mode is shown in Table 5.4 below.

Table 5.4: Residential Trip Numbers by Mode

| Mode | Morning Peak (0800-0900) | | | Afternoon Peak (1700-1800) | | |
|------------------------------|--------------------------|-----|-------|----------------------------|-----|-------|
| | Arr | Dep | Total | Arr | Dep | Total |
| Driving a car or van | 66 | 262 | 328 | 200 | 88 | 289 |
| Passenger in a car or van | 3 | 14 | 17 | 11 | 5 | 15 |
| On foot | 3 | 14 | 17 | 11 | 5 | 15 |
| Bus, minibus or coach | 2 | 9 | 11 | 7 | 3 | 10 |
| Bicycle | 1 | 5 | 7 | 4 | 2 | 6 |
| Motorcycle, scooter or moped | 1 | 2 | 3 | 2 | 1 | 2 |

- 5.4.5 Using the total number of vehicle trips predicted by the development is shown in Table 5.5 below. The school aspect is based on 420 pupils but takes no account of linked trips.

Table 5.5: Vehicle Trip Numbers

| Use | Morning Peak (0800-0900) | | | Afternoon Peak (1700-1800) | | |
|--------------|--------------------------|------------|------------|----------------------------|------------|------------|
| | Arr | Dep | Total | Arr | Dep | Total |
| Dwellings | 66 | 262 | 328 | 200 | 88 | 289 |
| School | 136 | 103 | 239 | 11 | 16 | 26 |
| Total | 213 | 409 | 622 | 245 | 119 | 364 |

- 5.4.6 The proposed development is predicted to generate 622 vehicle trips in the morning peak and 364 trips in the evening peak. Further junction analysis is required to understand the impact of this development on the highway network.

6.0 Junction Impact Assessment

6.1 Area of Assessment

6.1.1 The following junctions have been identified as requiring an impact assessment.

- A1: Access to Hookhams Lane;
- A2: Access to Ravensden Road;
- J1: Hookhams Lane / Norse Road / Church Lane / Wentworth Drive;
- J2: Wentworth Drive / Putnoe Lane;
- J3: A4280 St Neots Road / A4280 Goldington Road / Norse Road;
- J4: A421 / St Neots Road / A4280;
- J5: Ravensden Rd / Oldways Rd / Church End; and
- J6: B660 / Oldaways Road / Thurleigh Road.

6.2 Distribution

6.2.1 Residential vehicle trip distribution data has been obtained from the 2011 Census using the ‘WU03EW - Location of usual residence and place of work by method of travel to work (MSOA level)’ dataset. The 2011 Census data has been extracted using the following parameters

- Method of Travel to Work – Driving a car or van
- Place of Work – All
- Usual Residence – Bedford 004

6.2.2 Proposed vehicle trips have been assigned onto the highway network using online route planning software. The Census data with proposed assignment is shown in Appendix J.

6.2.3 School vehicle trips for the new primary school have been distributed using engineering judgement as follows:

- 60% originating from the 400 new dwellings on the development site.
- 40% local area predominately Salph End

6.2.4 Proposed development vehicle movement diagrams are shown on the plan enclosed in Appendix K.

6.3 Assessment Year

6.3.1 A planning application will be submitted in 2019. Therefore, a junction analysis will be undertaken for an assessment year of 2030 when the development is expected to be fully occupied.

6.3.2 To grow traffic counts to the future year assessment year Tempro growth factors will be applied utilising the following inputs:

- Tempro – 72;
- Bedford 004
- NTM AF15 – Urban, Principal
- AM peak growth factor – 1.1369
- PM peak growth factor – 1.1554

6.4 Background Traffic

6.4.1 Vehicle counts at the above junctions were completed on Wednesday 27th November 2019. The results are enclosed in Appendix L.

6.5 Committed Development

6.5.1 Except for the adjacent 14 dwelling development we are not aware of any developments which need to be considered separately and would not be picked up as part of generic Tempro assessment.

6.5.2 Vehicle trips from the adjacent development will be generated and assigned to the highway network in the same way as the vehicle trips from the proposed development.

7.0 Junction Analysis Results

7.1 Introduction

- 7.1.1 The junction assessments have been undertaken using TRL software Arcady 9 and PICADY 9 for roundabouts and priority junctions respectively.
- 7.1.2 A junction is considered to be operating within capacity if the RFC (Ratio to Flow Capacity) value is less than or equal to 0.85. A RFC value of 1.0 represents absolute capacity, however, a lower value of 0.85 is used to reflect the practical capacity of the junction.

7.2 A1: Site Access off Hookhams Lane

- 7.2.1 This junction is a new three arm simple priority junction and will comprise the new access for the development site. The arms are labelled thus:
- Arm A – Hookhams Lane (W)
Arm B – Access
Arm C – Hookhams Lane (E)
- 7.2.2 The full junction input data and result can be found in Appendix M. The results of the assessment are summarised below.

Table 7.1: A1 Access off Hookhams Lane – 2030 AM Peak 0800-0900

| Background + Committed + Development | | |
|--------------------------------------|---------|-----------|
| | Max RFC | Max Queue |
| B-C | 0.25 | 0 |
| B-A | 0.64 | 2 |
| C-AB | 0.11 | 0 |

Table 7.2: A1 Access off Hookhams Lane – 2030 AM Peak 0800-0900

| Background + Committed + Development | | |
|--------------------------------------|---------|-----------|
| | Max RFC | Max Queue |
| B-C | 0.05 | 0 |
| B-A | 0.2 | 0 |
| C-AB | 0.12 | 0 |

- 7.2.3 The access of Hookhams Lane is shown to operate within capacity in the future year scenario.

7.3 A2: Site Access off Ravensden Road

- 7.3.1 This junction is a new three arm simple priority junction and will comprise the new access for the development site. The arms are labelled thus:

Arm A – Ravensden Road (S)
Arm B – Access
Arm C – Ravensden Road (N)

- 7.3.2 The full junction input data and result can be found in Appendix N. The results of the assessment are summarised below.

Table 7.3: A1 Access off Ravensden Road – 2030 AM Peak 0800-0900

| | Background + Committed + Development | |
|------|--------------------------------------|-----------|
| | Max RFC | Max Queue |
| B-C | 0.07 | 0 |
| B-A | 0 | 0 |
| C-AB | 0.02 | 0 |

Table 7.4: A1 Access off Ravensden Road – 2030 AM Peak 0800-0900

| | Background + Committed + Development | |
|------|--------------------------------------|-----------|
| | Max RFC | Max Queue |
| B-C | 0.02 | 0 |
| B-A | 0 | 0 |
| C-AB | 0.07 | 0 |

- 7.3.3 The access of Ravensden Road is shown to operate within capacity in the future year scenario.

Junction 1: Hookhams Lane / Norse Road / Church Lane / Wentworth Drive

7.3.4 The junction is a four-arm roundabout, the arms are labelled thus:

- Arm A – Hookhams Lane
- Arm B – Norse Road
- Arm C – Church Lane
- Arm D – Wentworth Drive

7.3.5 The full junction input data and result can be found in Appendix O. The results of the assessment are summarised below.

Table 7.5: J1 Hookhams Ln / Norse Rd / Church Ln / Wentworth Dr – 2030 AM Peak 0800-0900

| | Background + Committed | | Background + Committed + Development | | Difference | |
|---------------------|------------------------|-----------|--------------------------------------|-----------|------------|-----------|
| | Max RFC | Max Queue | Max RFC | Max Queue | Max RFC | Max Queue |
| A – Hookhams Lane | 0.61 | 1 | 0.84 | 5 | 0.23 | 4 |
| B – Norse Road | 0.63 | 1 | 0.69 | 2 | 0.07 | 1 |
| C – Church Lane | 0.33 | 0 | 0.36 | 1 | 0.03 | 1 |
| D – Wentworth Drive | 0.65 | 1 | 0.67 | 2 | 0.02 | 1 |

Table 7.6: J1 Hookhams Ln / Norse Rd / Church Ln / Wentworth Dr – 2030 AM Peak 0800-0900

| | Background + Committed | | Background + Committed + Development | | Difference | |
|---------------------|------------------------|-----------|--------------------------------------|-----------|------------|-----------|
| | Max RFC | Max Queue | Max RFC | Max Queue | Max RFC | Max Queue |
| A – Hookhams Lane | 0.25 | 0 | 0.31 | 0 | 0.06 | 0 |
| B – Norse Road | 0.76 | 3 | 0.81 | 4 | 0.05 | 1 |
| C – Church Lane | 0.36 | 0 | 0.42 | 1 | 0.06 | 1 |
| D – Wentworth Drive | 0.39 | 1 | 0.44 | 1 | 0.05 | 0 |

7.3.6 The junction is shown to operate within capacity in all scenarios.

7.4 Junction 2: Wentworth Drive / Putnoe Lane

7.4.1 The junction is a three-arm roundabout, the arms are labelled thus:

- Arm A – Wentworth Drive (E)
- Arm B – Putnoe Lane
- Arm C – Wentworth Drive (W)

7.4.2 The full junction input data and result can be found in Appendix P. The results of the assessment are summarised below.

Table 7.7: J2 Wentworth Dr / Putnoe Lane – 2030 AM Peak 0800-0900

| | Background + Committed | | Background + Committed + Development | | Difference | |
|-------------------------|------------------------|-----------|--------------------------------------|-----------|------------|-----------|
| | Max RFC | Max Queue | Max RFC | Max Queue | Max RFC | Max Queue |
| A – Wentworth Drive (E) | 0.80 | 4 | 0.86 | 5 | 0.06 | 1 |
| B – Putnoe Lane | 0.55 | 1 | 0.57 | 1 | 0.02 | 0 |
| C – Wentworth Drive (W) | 0.92 | 9 | 0.93 | 10 | 0.01 | 1 |

Table 7.8: J2 Wentworth Dr / Putnoe Lane – 2030 AM Peak 0800-0900

| | Background + Committed | | Background + Committed + Development | | Difference | |
|-------------------------|------------------------|-----------|--------------------------------------|-----------|------------|-----------|
| | Max RFC | Max Queue | Max RFC | Max Queue | Max RFC | Max Queue |
| A – Wentworth Drive (E) | 0.81 | 4 | 0.83 | 5 | 0.02 | 0 |
| B – Putnoe Lane | 0.47 | 1 | 0.51 | 1 | 0.04 | 0 |
| C – Wentworth Drive (W) | 0.48 | 1 | 0.51 | 1 | 0.03 | 0 |

7.4.3 The junction is shown to typically operate within capacity in all scenarios, except for both Wentworth Drive arms during the morning peak period.

7.4.4 The Wentworth Road (E) arm operates with a RFC value of 0.80 without development and 0.86 with development, an increase of 0.06. As a result of the development the queue length increases by 1 from 4 to 5. Whilst the development takes the junction from operating within capacity to operating over capacity with an RFC value greater than 0.85 the impact of the development is minimal and should not be considered significant.

7.4.5 The Wentworth Road (W) arm operates with a RFC value of 0.92 without development and 0.93 with development, an increase of 0.01. As a result of the development the queue length increases by 1 from 9 to 10. The impact of the development is minimal and should not be considered significant.

7.4.6 The impact of the development is considered insignificant, therefore, nil detriment improvements are not considered necessary.

7.5 Junction 3: A4280 St Neots Road / A4280 Goldington Road / Norse Road

7.5.1 The junction is a four-arm roundabout, the arms are labelled thus:

- Arm A – A4280 St Neots Road
- Arm B – A4280 Goldington Road – Exit Only
- Arm C – A4280 Goldington Road – Entry Only
- Arm D – Norse Road

7.5.2 The full junction input data and result can be found in Appendix Q. The results of the assessment are summarised below.

Table 7.9: J3 A4280 St Neots Rd / A4280 Goldington Rd / Norse Rd – 2030 AM Peak 0800-0900

| | Background + Committed | | Background + Committed + Development | | Difference | |
|---------------------|------------------------|-----------|--------------------------------------|-----------|------------|-----------|
| | Max RFC | Max Queue | Max RFC | Max Queue | Max RFC | Max Queue |
| A – St Neots Rd | 1.05 | 55 | 1.06 | 61 | 0.01 | 6 |
| B – Southern Access | ∞ | 6 | ∞ | 8 | 0 | 2 |
| C – Goldington Road | 0.53 | 1 | 0.54 | 1 | 0.01 | 0 |
| D – Norse Road | 0.86 | 6 | 0.90 | 8 | 0.04 | 2 |

Table 7.10: J3 A4280 St Neots Rd / A4280 Goldington Rd / Norse Rd – 2030 PM Peak 1700-1800

| | Background + Committed | | Background + Committed + Development | | Difference | |
|---------------------|------------------------|-----------|--------------------------------------|-----------|------------|-----------|
| | Max RFC | Max Queue | Max RFC | Max Queue | Max RFC | Max Queue |
| A – St Neots Rd | 1.12 | 108 | 1.14 | 131 | 0.02 | 23 |
| B – Southern Access | ∞ | 11 | ∞ | 11 | 0 | 0 |
| C – Goldington Road | 0.61 | 2 | 0.61 | 2 | 0 | 0 |
| D – Norse Road | 0.59 | 2 | 0.60 | 2 | 0.01 | 0 |

7.5.3 Arm A St Neots Road operates over capacity in both peak periods the impact of development is considered significant and a nil detriment solution will be required.

7.5.4 Arm B Southern Access operates with an unregisterable RFC value in all scenarios. Due to the movement patterns on the roundabout with few vehicles turning into Arm B few opportunities are created within the model for vehicles to exit Arm B. In reality the small number of exiting vehicles just 10 vehicles in the morning peak and 14 vehicles in the evening peak would be able to depart with much less delay than predicted in the model. Bunching of vehicles and natural variations in flow would create opportunities for vehicles to depart. Therefore, mitigation is not considered necessary.

- 7.5.5 Arm C Goldington Road operates with ample capacity in both the morning and evening peak period.
- 7.5.6 Arm D Norse Road operates over capacity in the morning peak period only. Without development RFC values are 0.86 increasing by 0.04 to 0.90 with the proposed development. As a result of the development the predicted queue length increases by 2 from 6 to 8. The impact of the development on this arm is not considered significant.
- 7.5.7 To achieve nil detriment mitigation on the St Neots Road arm the geometry improvements as shown in Table 7.11 below are required to achieve nil detriment. These changes are also shown on the table enclosed in Appendix R.

Table 7.11: J3 Arm A St Neots Road Nil Detriment Geometry Changes

| | Existing | Nil Det | Change |
|-------------------|----------|---------|--------|
| E – Entry Width | 7.03 | 7.36 | +0.33 |
| I' – Flare length | 30.8 | 27.9 | -2.9 |
| R – Entry Radius | 14.0 | 29.7 | +15.7 |

- 7.5.8 The results of the nil detriment analysis are shown in Table 7.12 and Table 7.13 below with full results enclosed in Appendix S.

Table 7.12: J3 A4280 St Neots Rd / A4280 Goldington Rd / Norse Rd – 2030 AM Peak 0800-0900 – NIL DET

| | Background + Committed | | Background + Committed + Development – NIL DET | | Difference | |
|---------------------|------------------------|-----------|--|-----------|------------|-----------|
| | Max RFC | Max Queue | Max RFC | Max Queue | Max RFC | Max Queue |
| A – St Neots Rd | 1.05 | 55 | 0.99 | 29 | -0.06 | -26 |
| B – Southern Access | ∞ | 6 | ∞ | 6 | 0 | 0 |
| C – Goldington Road | 0.53 | 1 | 0.54 | 1 | +0.01 | 0 |
| D – Norse Road | 0.86 | 6 | 0.90 | 8 | +0.04 | +2 |

Table 7.13: J3 A4280 St Neots Rd / A4280 Goldington Rd / Norse Rd – 2030 PM Peak 1700-1800 – NIL DET

| | Background + Committed | | Background + Committed + Development – NIL DET | | Difference | |
|---------------------|------------------------|-----------|--|-----------|------------|-----------|
| | Max RFC | Max Queue | Max RFC | Max Queue | Max RFC | Max Queue |
| A – St Neots Rd | 1.12 | 108 | 1.08 | 86 | -0.04 | 22 |
| B – Southern Access | ∞ | 11 | | 11 | 0 | 0 |
| C – Goldington Road | 0.61 | 2 | 0.62 | 2 | +0.01 | 0 |
| D – Norse Road | 0.59 | 2 | 0.60 | 2 | +0.01 | 0 |

- 7.5.9 The proposed nil detriment solution mitigates the impact of the proposed development on the junction during both the morning and evening peak periods. Hence, with mitigation the proposed development will not have a significant adverse impact on the highway network.

7.7 Junction 4: A421 / St Neots Road / A4280.

- 7.7.1 The junction is a grade separated dumbbell junction located above the A421. The junction comprises of two roundabouts. One to the north with five arms and one to the south with four arms. The arms are labelled thus:

Northern roundabout

Arm A – A421 (N) – exit only
 Arm B – Connecting bridge
 Arm C – A421 (S) – entry only
 Arm D – St Neots Road
 Arm E – Water End

Southern roundabout

Arm A – A421 (N) – entry only
 Arm B – St Neots Road
 Arm C – A421 (S) – exit only
 Arm D – Connecting bridge

- 7.7.2 The full junction input data and result can be found in Appendix T. The results of the assessment are summarised below.

Table 7.14: J4 A421 / St Neots Road / A4280 – 2030 AM Peak 0800-0900

| | Background + Committed | | Background + Committed + Development | | Difference | |
|----------------------------|------------------------|-----------|--------------------------------------|-----------|------------|-----------|
| | Max RFC | Max Queue | Max RFC | Max Queue | Max RFC | Max Queue |
| 1B – Connecting bridge | 0.32 | 1 | 0.33 | 1 | 0.01 | 0 |
| 1C – A421 (S) – entry only | 0.44 | 1 | 0.45 | 1 | 0.01 | 0 |
| 1D – St Neots Road | 0.84 | 5 | 0.88 | 7 | 0.04 | 2 |
| 1E – Water End | 0.34 | 1 | 0.46 | 1 | 0.12 | 0 |
| 2A – A421 (N) – entry only | 0.31 | 1 | 0.33 | 1 | 0.02 | 0 |
| 2B – St Neots Road | 0.65 | 2 | 0.67 | 2 | 0.04 | 0 |
| 2D – Water End | 0.59 | 2 | 0.61 | 2 | 0.02 | 0 |

Table 7.15: J4 A421 / St Neots Road / A4280 – 2030 PM Peak 1700-1800

| | Background + Committed | | Background + Committed + Development | | Difference | |
|----------------------------|------------------------|-----------|--------------------------------------|-----------|------------|-----------|
| | Max RFC | Max Queue | Max RFC | Max Queue | Max RFC | Max Queue |
| 1B – Connecting bridge | 0.33 | 1 | 0.36 | 1 | 0.03 | 0 |
| 1C – A421 (S) – entry only | 0.65 | 2 | 0.68 | 2 | 0.03 | 0 |
| 1D – St Neots Road | 0.71 | 2 | 0.73 | 3 | 0.02 | 1 |
| 1E – Water End | 0.13 | 0 | 0.16 | 0 | 0.03 | 0 |
| 2A – A421 (N) – entry only | 0.40 | 1 | 0.41 | 1 | 0.01 | 0 |
| 2B – St Neots Road | 0.44 | 1 | 0.46 | 1 | 0.02 | 0 |
| 2D – Water End | 0.63 | 2 | 0.64 | 2 | 0.01 | 0 |

- 7.7.3 Except for the St Neots Road arm of the northern roundabout the junction typically operates within capacity. The St Neots Road arm of northern roundabout operates overcapacity in the morning peak hour only with RFC values of 0.85 and 0.89 in the morning peak without and with development scenarios respectively. As a result of the development the predicted queue length increases by 2 vehicles from 5 to 7.
- 7.7.4 The impact of the development in the morning peak hour on St Neots Road arm of the northern roundabout requires is considered insignificant.

7.8 Junction 5: Ravensden Rd / Oldways Rd / Church End

7.8.1 The junction is a three-arm simple priority junction, the arms are labelled thus:

- Arm A – Oldways Road
- Arm B – Church End
- Arm C – Ravensden Road

7.8.2 The full junction input data and result can be found in Appendix P. The results of the assessment are summarised below.

Table 7.16: J5 Ravensden Rd / Oldways Rd / Church End – 2030 AM Peak 0800-0900

| | Background + Committed | | Background + Committed + Development | | Difference | |
|------|------------------------|-----------|--------------------------------------|-----------|------------|-----------|
| | Max RFC | Max Queue | Max RFC | Max Queue | Max RFC | Max Queue |

| B-A | 0.05 | 0 | 0.05 | 0 | 0 | 0 |
| C-AB | 0.06 | 0 | 0.07 | 0 | 0.01 | 0 |

7.8.3 The junction is shown to typically operate within capacity in all scenarios.

7.9 Junction 6: B660 / Oldways Rd / Thurleigh Rd

7.9.1 The junction is a four-arm staggered crossroads junction, the arms are labelled thus:

- Arm A – B660 N
- Arm B – Oldways Road
- Arm C – B660 S
- Arm D – Thurleigh Road

7.9.2 The full junction input data and result can be found in Appendix P. The results of the assessment are summarised below.

Table 7.18: J6 B660 / Oldways Rd / Thurleigh Rd – 2019

| | AM Background | | PM Background | |
|-------|---------------|-----------|---------------|-----------|
| | Max RFC | Max Queue | Max RFC | Max Queue |

| C-ABD | 0.20 | 0 | 0.21 | 0 | 0.01 | 0 |

Table 7.20: J6 B660 / Oldways Rd / Thurleigh Rd – 2030 AM Peak 0800-0900

| | Background + Committed | | Background + Committed + Development | | Difference | |
|-------|------------------------|-----------|--------------------------------------|-----------|------------|-----------|
| | Max RFC | Max Queue | Max RFC | Max Queue | Max RFC | Max Queue |
| B-ACD | 0.89 | 6 | 0.93 | 8 | 0.04 | 2 |
| A-BCD | 0.05 | 0 | 0.05 | 0 | 0 | 0 |
| D-A | 0.05 | 0 | 0.05 | 0 | 0 | 0 |
| D-BC | 0.47 | 1 | 0.50 | 1 | 0.03 | 0 |
| C-ABD | 0.06 | 0 | 0.06 | 0 | 0 | 0 |

7.9.3 In the morning peak period Arm D Thurleigh Road operates over capacity in 2019 and 2030. RFC values peak at 1.30 with the development increasing RFC values by 0.03 and increasing vehicle queue length by 10. The proposed development will generate 10 additional vehicle movements during the morning peak period on this arm.

- 7.9.4 In the 2019 base year traffic survey 466 of the 485 cars using Thurleigh Road wish to turn right to either access the B660 S or Oldways Road. Therefore, mitigation would not improve the flow of traffic through this junction as it is not possible to provide two right turning lanes. Neither is it considered appropriate to change the junction type to either a roundabout or a signal-controlled junction.
- 7.9.5 The proposed development will only generate ten additional vehicle trips in the morning peak period on this arm. This is less than the likely daily variation in traffic flows and could be considered minimal insignificant flow. Further as the junction is already operating over capacity users of the junction will be sensitive to change and would seek to use alternative routes where appropriate included users of the proposed development.
- 7.9.6 Whilst the development does have an adverse impact on the Thurleigh Road arm, the impact is considered insignificant.
- 7.9.7 In the evening peak period Oldways operates over capacity in 2030 both without and with the proposed development. As a result of the development RFC values increase from 0.89 to 0.93 which results in a 2 vehicle increase in queue length from 6 to 8. The impact of the development is minor and insignificant and mitigation is not considered necessary.

8.0 Conclusion

8.1 Site Location and Permitted Use

- 8.1.1 The proposed residential development is located at land between Hookhams Lane and Ravensden Road, Salph End.
- 8.1.2 The site currently comprises agricultural land there has been no previous development on the site

8.2 Existing Conditions

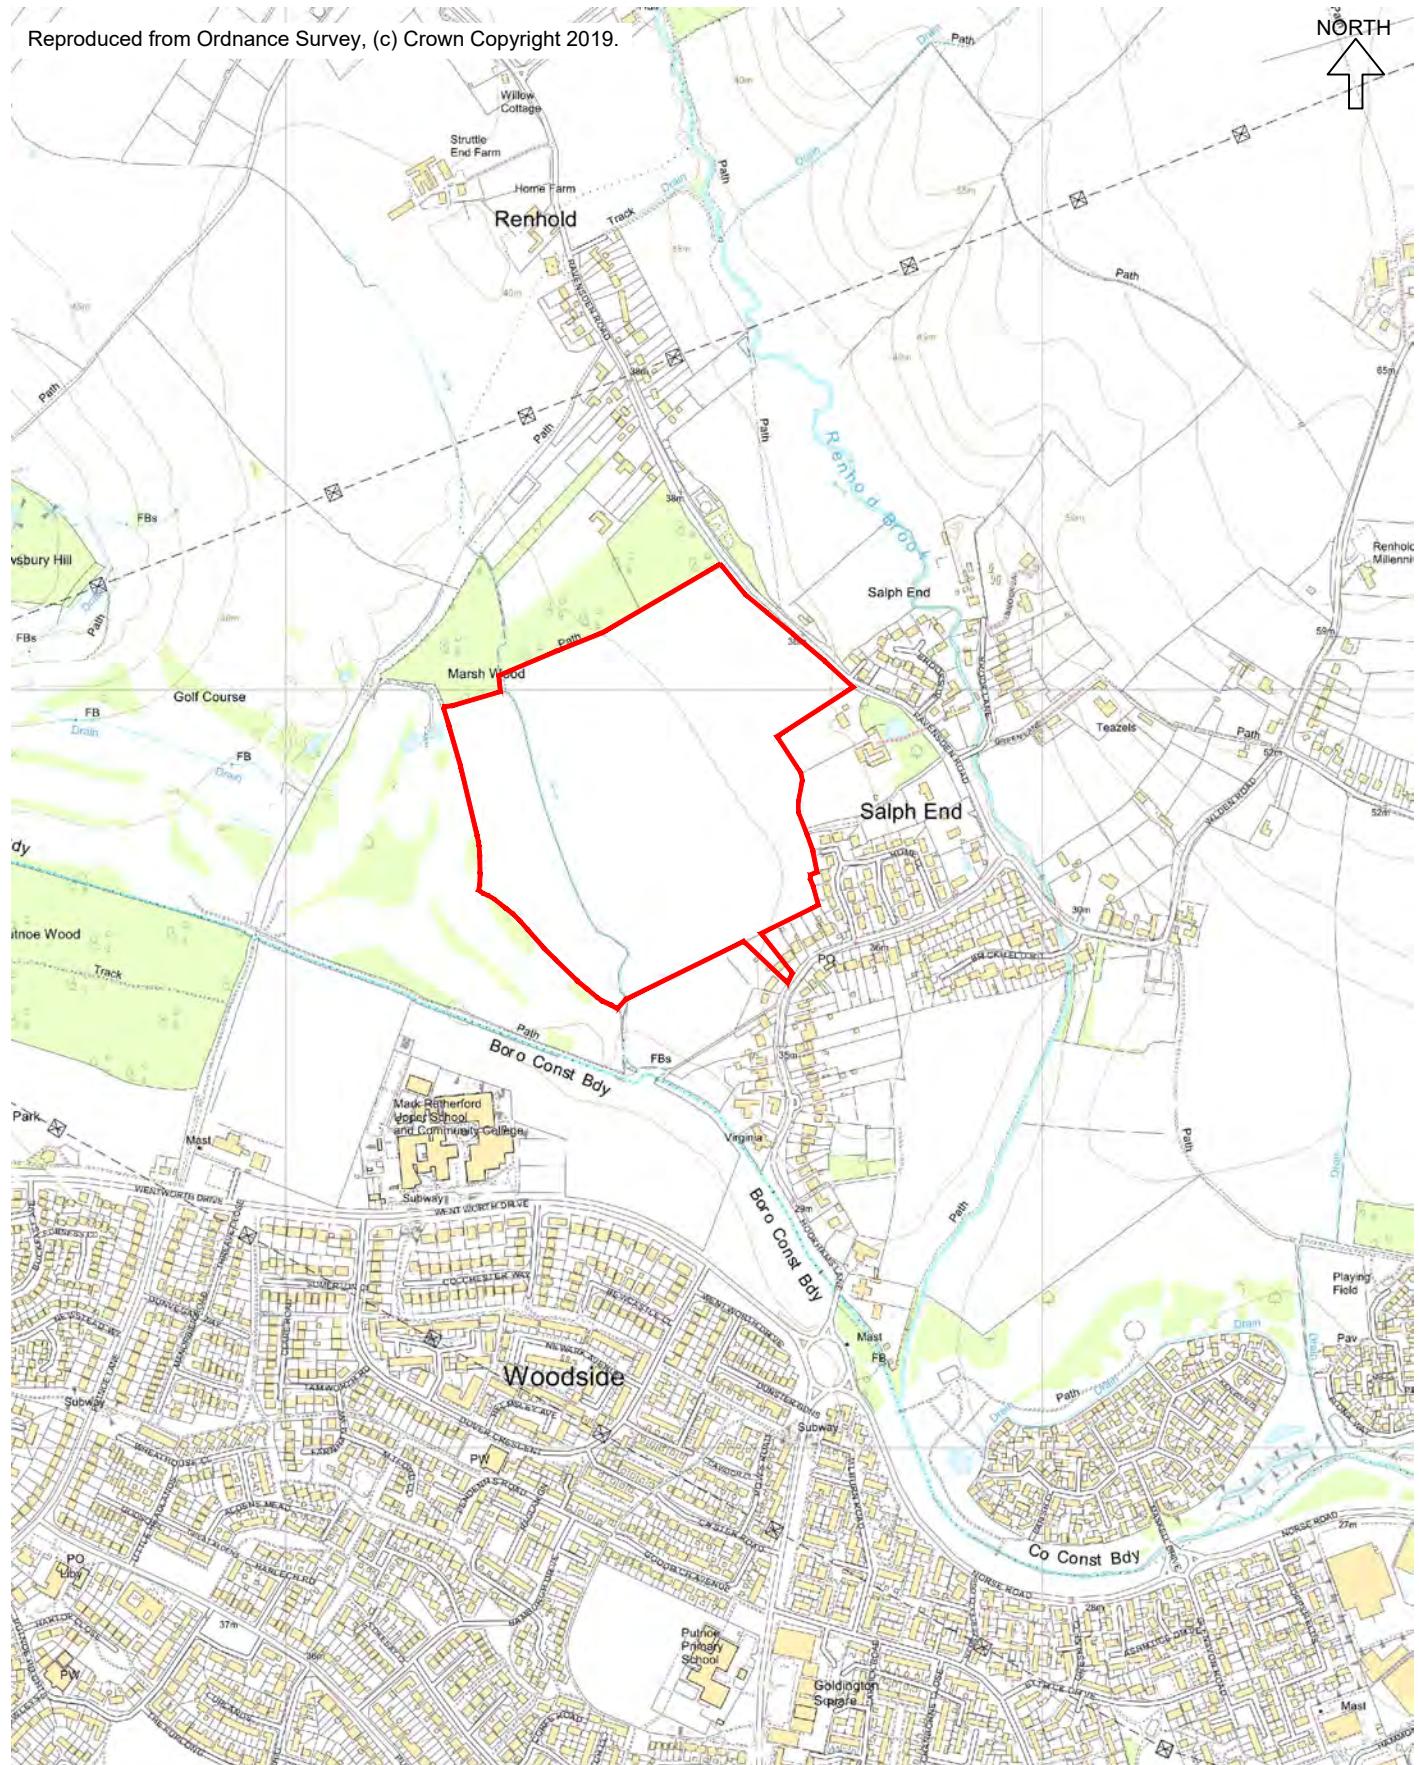

- 8.2.1 The proposed development is shown to adequately served for pedestrian, cyclist and public transport infrastructure.
- 8.2.2 The footway provision between the development and the local facilities is adequate for purpose and would allow pedestrians of the development to access the local facilities. From our desktop review of the existing pedestrian facilities we are not aware of any deficiencies in the footway network which would prevent or significantly reduce the likelihood of residents walking to / from the development site.
- 8.2.3 A review of the accident data shows that there is not an accident data on the highway network within the vicinity of the proposed development site.

8.3 Proposed Development

- 8.3.1 The proposed development will comprise up to 400 residential dwellings and a two-form entry primary school, up to 420 pupils.
- 8.3.2 The proposed development will be principally accessed off Hookhams Lane via a new access through 25 Hookhams Lane. A secondary access is provided off Ravensden Road.
- 8.3.3 A spine road, with a width of 6.0m, will connect both accesses making this a suitable route for use by buses. Other adoptable roads within the development site will be constructed inline with the current design standards but will typically comprise 5.5m wide carriageway with 2 no. 2m wide footways for non-shared surfaces.
- 8.3.4 In addition, the spine road will also provide a 3m wide shared footway / cycleway within the development site.
- 8.3.5 Parking within the development will be provided in line with current Bedfordshire Borough Council guidance at the time of a full or reserved matters planning application.
- 8.3.6 A junction analysis of the impact from the proposed development has been undertaken at 4 junctions and both accesses. Typically, the impact of the development on the highway network is insignificant.

- 8.3.7 At Junction 3: A4280 St Neots Road / A4280 Goldington Road / Norse Road the impact of the development is such that mitigation is required to the St Neots Road. Small increases are required to the entry width, entry radius and flare length to mitigate the impact of the development on the highway network.

Late Summer Bank Holiday (Monday 26th Aug)

no service

Service Restrictions: NSch - School holidays only: 11 Feb-15 Feb, 8 Apr-22 Apr, 27 May-3 Jun, 22 Jul-3 Sep
 Sch - School days only: 3 Jan-8 Feb, 18 Feb-5 Apr, 23 Apr-24 May, 4 Jun-19 Jul

For times of the next departures from a particular stop you can use **traveline-txt** - by sending the SMS code to **84268**. Add the service number after the code if you just want a specific service - eg: **buctdgt 60**. The return message from **traveline-txt** will show the next three departures, and it currently costs 25p plus any message sending charge. Departure times will be real-time predictions where available, or scheduled departure times if not.

You can also get the same information by using the SMS code at www.nextbuses.mobi (only normal browsing charges apply) or through several iPhone or Android apps that offer access to **NextBuses**.

NOTE: SMS codes are different in each direction. Make sure you choose the right direction from these lists.

| Description: V1 was entering Hookhams Lane from the roundabout. On the other side of the road was a queue of traffic where a pedestrian crossing over the road has been covered by a white van. As V1 has been driving down Hookhams Lane, a 12 year old male on a bicycle (V2) has come out from behind the van into the road. Driver of V1 has a short period of time to react managing to brake but has collided with the male causing him to fall off his bicycle hitting his head, knee and ankle. | | | | | | | | | |

| Description: V1 HAD BEEN TRAVELLING WESTBOUND ALONG THE A421, WHEN IT COLLIDED HEAVILY WITH THE CENTRAL RESERVATION BARRIER, CAUSING EXTENSIVE DAMAGE TO X17 UPRIGHT POSTS AND TO THE VEHICLE ITSELF. AS A RESULT OF THIS COLLISION, V1 CAME TO A STOP IN LANE 1, AND HAD NO HAZARD OR MAIN LIGHTS ILLUMINATED. V2 HAD ALSO BEEN TRAVELLING WESTBOUND ALONG THE A421, AND HAD TO SWERVE OUT OF THE WAY TO AVOID A DIRECT COLLISION, WITH V1, AS IT SAW IT AT THE LAST MINUTE, DUE TO NO LIGHTS BEING ILLUMINATED. AS A RESULT, V2 ALSO COLLIDED WITH THE CENTRAL RESERVATION BARRIER, BEFORE COMING TO A STOP IN LANE 1. DAMAGE TO X5 MORE UPRIGHTS HAD BEEN CAUSED BY V2. | | | | | | | | | | |

This section displays the number of survey days per TRICS® sub-region in the selected set

Secondary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Number of dwellings
 Actual Range: 6 to 805 (units:)
 Range Selected by User: 6 to 805 (units:)

Parking Spaces Range: All Surveys Included

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/11 to 20/11/18

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

| | |
|-----------|---------|
| Monday | 10 days |
| Tuesday | 11 days |
| Wednesday | 13 days |
| Thursday | 11 days |
| Friday | 7 days |

This data displays the number of selected surveys by day of the week.

Selected survey types:

| | |
|-----------------------|---------|
| Manual count | 52 days |
| Directional ATC Count | 0 days |

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

| | |
|------------------------------------|----|
| Suburban Area (PPS6 Out of Centre) | 25 |
| Edge of Town | 27 |

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

| | |
|------------------|----|
| Residential Zone | 50 |
| No Sub Category | 2 |

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

| | |
|----|---------|
| C3 | 52 days |
|----|---------|

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 1 mile:

| | |
|------------------|---------|
| 1,000 or Less | 1 days |
| 1,001 to 5,000 | 6 days |
| 5,001 to 10,000 | 10 days |
| 10,001 to 15,000 | 15 days |
| 15,001 to 20,000 | 9 days |
| 20,001 to 25,000 | 6 days |
| 25,001 to 50,000 | 5 days |

This data displays the number of selected surveys within stated 1-mile radii of population.

Secondary Filtering selection (Cont.):**Population within 5 miles:**

| | |
|--------------------|---------|
| 5,001 to 25,000 | 5 days |
| 25,001 to 50,000 | 3 days |
| 50,001 to 75,000 | 7 days |
| 75,001 to 100,000 | 13 days |
| 100,001 to 125,000 | 2 days |
| 125,001 to 250,000 | 16 days |
| 250,001 to 500,000 | 5 days |
| 500,001 or More | 1 days |

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

| | |
|------------|---------|
| 0.6 to 1.0 | 15 days |
| 1.1 to 1.5 | 37 days |

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

| | |
|-----|---------|
| Yes | 10 days |
| No | 42 days |

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

| | |
|-----------------|---------|
| No PTAL Present | 52 days |
|-----------------|---------|

This data displays the number of selected surveys with PTAL Ratings.

| Total Rates: | | 3.842 | | | 3.955 | | | 7.797 | |

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

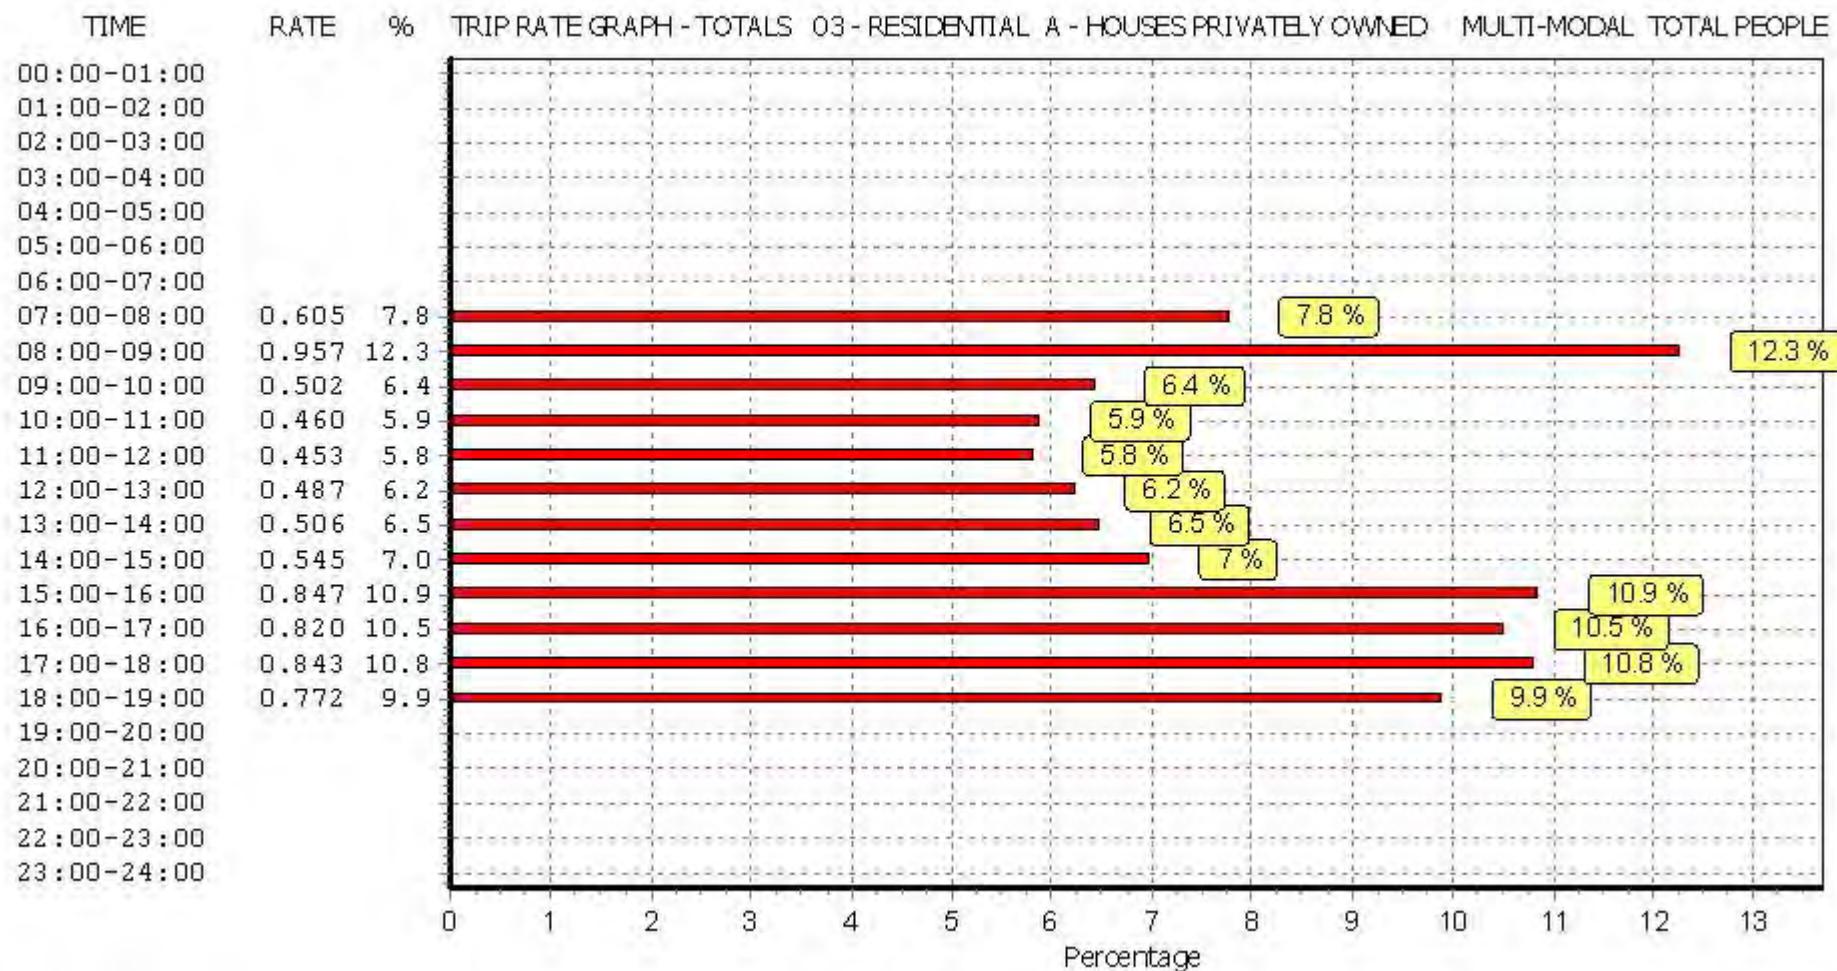

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

This graph is a visual representation of the trip rate calculation results screen. The same time periods and trip rates are displayed, but in addition there is an additional column showing the percentage of the total trip rate by individual time period, allowing peak periods to be easily identified through observation. Note that the type of count and the selected direction is shown at the top of the graph.

This graph is a visual representation of the trip rate calculation results screen. The same time periods and trip rates are displayed, but in addition there is an additional column showing the percentage of the total trip rate by individual time period, allowing peak periods to be easily identified through observation. Note that the type of count and the selected direction is shown at the top of the graph.

*This section displays the number of survey days per TRICS® sub-region in the selected set***Secondary Filtering selection:***This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.*

Parameter: Number of pupils

Actual Range: 147 to 621 (units:)

Range Selected by User: 79 to 657 (units:)

Parking Spaces Range: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/11 to 12/07/17

*This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.**Selected survey days:*

| | |
|-----------|--------|
| Monday | 4 days |
| Tuesday | 4 days |
| Wednesday | 1 days |
| Thursday | 5 days |

*This data displays the number of selected surveys by day of the week.**Selected survey types:*

| | |
|-----------------------|---------|
| Manual count | 14 days |
| Directional ATC Count | 0 days |

*This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.**Selected Locations:*

| | |
|------------------------------------|---|
| Suburban Area (PPS6 Out of Centre) | 6 |
| Edge of Town | 8 |

*This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.**Selected Location Sub Categories:*

| | |
|------------------|----|
| Residential Zone | 13 |
| No Sub Category | 1 |

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

D1

14 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 1 mile:

| | |
|------------------|--------|
| 1,001 to 5,000 | 1 days |
| 5,001 to 10,000 | 3 days |
| 10,001 to 15,000 | 1 days |
| 15,001 to 20,000 | 4 days |
| 20,001 to 25,000 | 1 days |
| 25,001 to 50,000 | 4 days |

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

| | |
|--------------------|--------|
| 5,001 to 25,000 | 1 days |
| 125,001 to 250,000 | 4 days |
| 250,001 to 500,000 | 7 days |
| 500,001 or More | 2 days |

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

| | |
|------------|--------|
| 0.6 to 1.0 | 7 days |
| 1.1 to 1.5 | 7 days |

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

| | |
|-----|---------|
| Yes | 2 days |
| No | 12 days |

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

| | |
|-----------------|---------|
| No PTAL Present | 14 days |
|-----------------|---------|

This data displays the number of selected surveys with PTAL Ratings.

| Total Rates: | | 0.833 | | | 0.821 | | | | 1.654 |

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. The Company authorises those who possess a current TRICS licence to access the TRICS Database and copy the data contained within the TRICS Database for the licence holders' use only. Parameter summary

| | |
|---|---------------------|
| Trip rate parameter range selected: | 147 - 621 (units:) |
| Survey date date range: | 01/01/11 - 12/07/17 |
| Number of weekdays (Monday-Friday): | 14 |
| Number of Saturdays: | 0 |
| Number of Sundays: | 0 |
| Surveys automatically removed from selection: | 0 |
| Surveys manually removed from selection: | 0 |

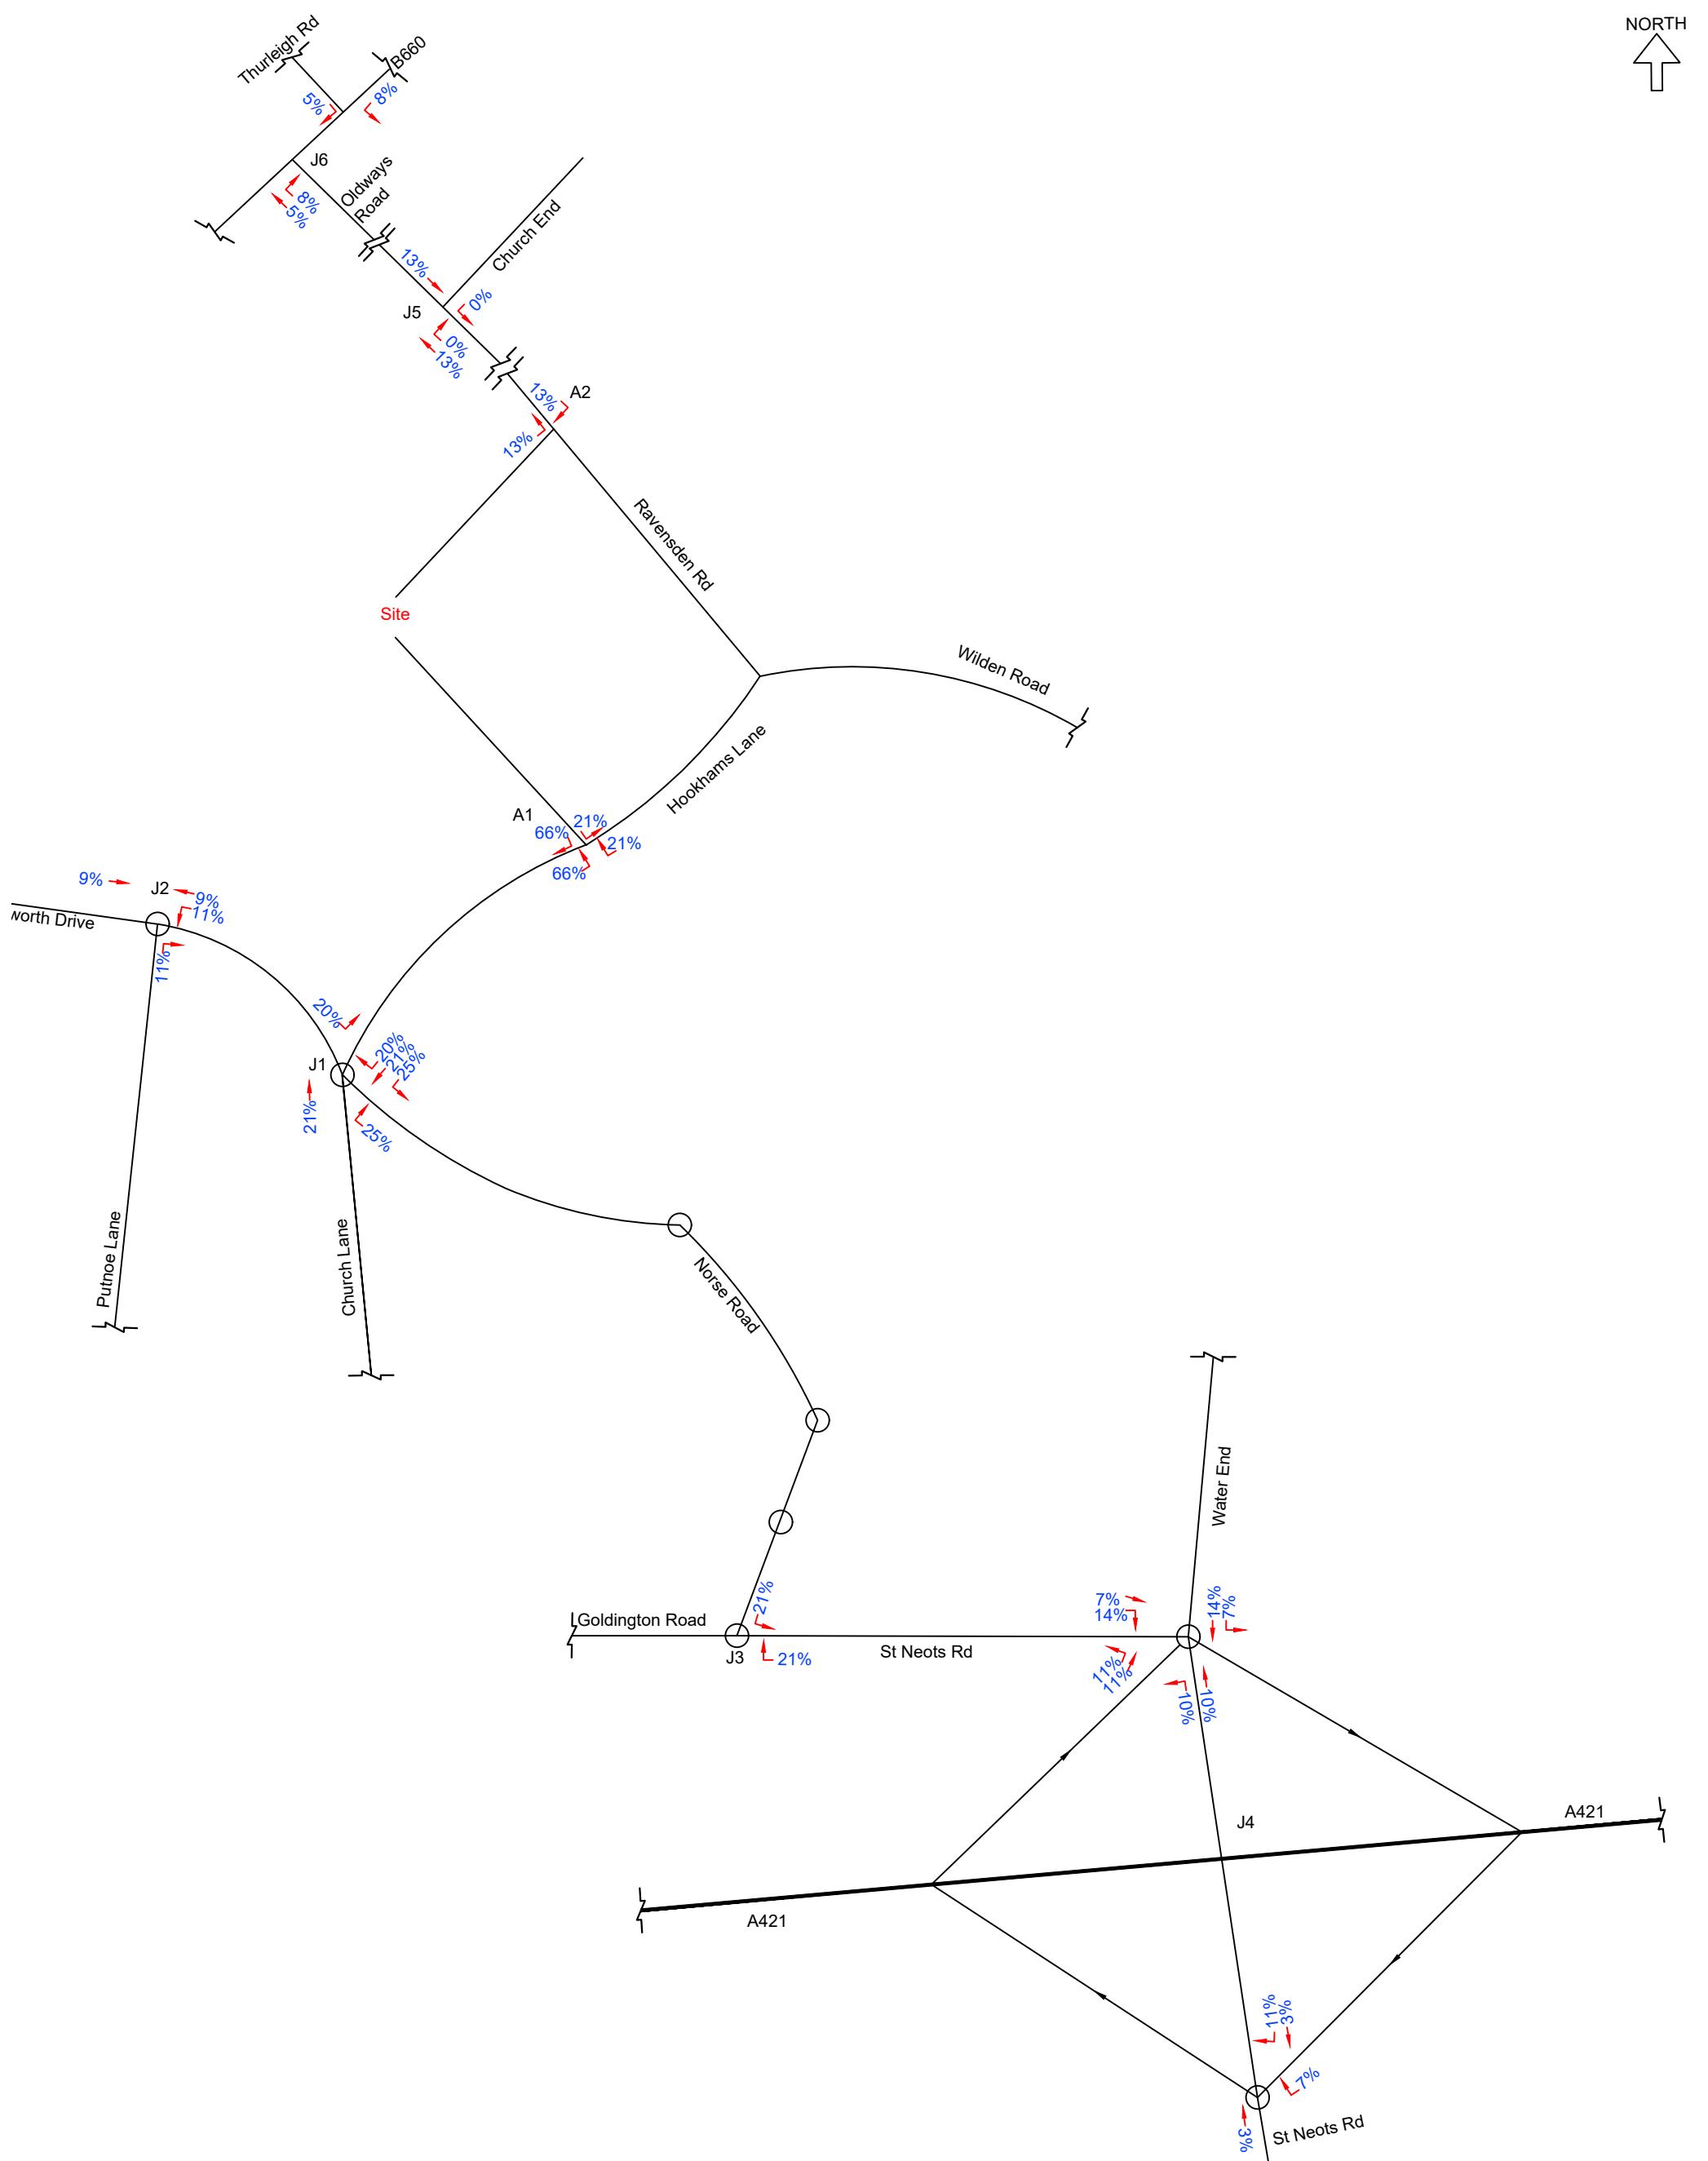

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Summary of junction performance

| | AM | | | | PM | | | |
|---------------------------|-------------|-----------|------|-----|-------------|-----------|------|-----|
| | Queue (PCU) | Delay (s) | RFC | LOS | Queue (PCU) | Delay (s) | RFC | LOS |
| 2030-Base+Comm+Dev | | | | | | | | |
| Stream B-C | 0.3 | 14.69 | 0.25 | B | 0.1 | 8.64 | 0.05 | A |
| Stream B-A | 1.7 | 28.63 | 0.64 | D | 0.3 | 13.38 | 0.20 | B |
| Stream C-AB | 0.3 | 4.96 | 0.11 | A | 0.2 | 5.97 | 0.12 | A |

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

Units

| Distance units | Speed units | Traffic units input | Traffic units results | Flow units | Average delay units | Total delay units | Rate of delay units |
|----------------|-------------|---------------------|-----------------------|------------|---------------------|-------------------|---------------------|
| m | kph | PCU | PCU | perHour | s | -Min | perMin |

Analysis Options

| Vehicle length (m) | Calculate Queue Percentiles | Calculate detailed queueing delay | Calculate residual capacity | RFC Threshold | Average Delay threshold (s) | Queue threshold (PCU) |
|--------------------|-----------------------------|-----------------------------------|-----------------------------|---------------|-----------------------------|-----------------------|
| 5.75 | | | | 0.85 | 36.00 | 20.00 |

Demand Set Summary

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|--------------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D5 | 2030-Base+Comm+Dev | AM | ONE HOUR | 07:45 | 09:15 | 15 | ✓ |
| D6 | 2030-Base+Comm+Dev | PM | ONE HOUR | 16:45 | 18:15 | 15 | ✓ |

Analysis Set Details

| ID | Include in report | Network flow scaling factor (%) | Network capacity scaling factor (%) |
|----|-------------------|---------------------------------|-------------------------------------|
| A1 | ✓ | 100.000 | 100.000 |

2030-Base+Comm+Dev, AM

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

| Junction | Name | Junction type | Major road direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|-------------------------|---------------|----------------------|-----------------------|--------------------|--------------|
| A1 | Access to Hookhams Lane | T-Junction | Two-way | | 6.45 | A |

Junction Network Options

| Driving side | Lighting |
|--------------|----------------|
| Left | Normal/unknown |

Arms

Arms

| Arm | Name | Description | Arm type |
|-----|-----------------|-------------|----------|
| A | Hookhams Ln (W) | | Major |
| B | Access | | Minor |
| C | Hookhams Ln (E) | | Major |

Major Arm Geometry

| Arm | Width of carriageway (m) | Has kerbed central reserve | Has right turn bay | Visibility for right turn (m) | Blocks? | Blocking queue (PCU) |
|-----|--------------------------|----------------------------|--------------------|-------------------------------|---------|----------------------|
| C | 6.00 | | | 93.0 | ✓ | 0.00 |

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

| Arm | Minor arm type | Width at give-way (m) | Width at 5m (m) | Width at 10m (m) | Width at 15m (m) | Width at 20m (m) | Estimate flare length | Flare length (PCU) | Visibility to left (m) | Visibility to right (m) |
|-----|---------------------|-----------------------|-----------------|------------------|------------------|------------------|-----------------------|--------------------|------------------------|-------------------------|
| B | One lane plus flare | 7.08 | 3.28 | 3.00 | 3.00 | 3.00 | | 1.00 | 25 | 40 |

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

| Junction | Stream | Intercept (PCU/hr) | Slope for A-B | Slope for A-C | Slope for C-A | Slope for C-B |
|----------|--------|--------------------|---------------|---------------|---------------|---------------|
| A1 | B-A | 528 | 0.096 | 0.243 | 0.153 | 0.348 |
| A1 | B-C | 589 | 0.090 | 0.228 | - | - |
| A1 | C-B | 628 | 0.243 | 0.243 | - | - |

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Demand Set Details

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|--------------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D5 | 2030-Base+Comm+Dev | AM | ONE HOUR | 07:45 | 09:15 | 15 | ✓ |

| Vehicle mix varies over turn | Vehicle mix varies over entry | Vehicle mix source | PCU Factor for a HV (PCU) |
|------------------------------|-------------------------------|--------------------|---------------------------|
| ✓ | ✓ | HV Percentages | 2.00 |

Demand overview (Traffic)

| Arm | Linked arm | Profile type | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|--------------|-------------------------|--------------------|
| A | | ONE HOUR | ✓ | 374 | 100.000 |
| B | | ONE HOUR | ✓ | 273 | 100.000 |
| C | | ONE HOUR | ✓ | 467 | 100.000 |

Origin-Destination Data

Demand (PCU/hr)

Summary of junction performance

| | AM | | | | PM | | | |
|---------------------------|-------------|-----------|------|-----|-------------|-----------|------|-----|
| | Queue (PCU) | Delay (s) | RFC | LOS | Queue (PCU) | Delay (s) | RFC | LOS |
| 2030-Base+Comm+Dev | | | | | | | | |
| Stream B-C | 0.1 | 6.09 | 0.07 | A | 0.0 | 6.35 | 0.02 | A |
| Stream B-A | 0.0 | 0.00 | 0.00 | A | 0.0 | 0.00 | 0.00 | A |
| Stream C-AB | 0.0 | 4.44 | 0.02 | A | 0.1 | 5.43 | 0.07 | A |

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

| Identifier | |
| Client | |
| Jobnumber | |
| Enumerator | DESKTOP-2HPI2P9\Martin |
| Description | |

Units

| Distance units | Speed units | Traffic units input | Traffic units results | Flow units | Average delay units | Total delay units | Rate of delay units |
|----------------|-------------|---------------------|-----------------------|------------|---------------------|-------------------|---------------------|
| m | kph | PCU | PCU | perHour | s | -Min | perMin |

Analysis Options

| Vehicle length (m) | Calculate Queue Percentiles | Calculate detailed queueing delay | Calculate residual capacity | RFC Threshold | Average Delay threshold (s) | Queue threshold (PCU) |
|--------------------|-----------------------------|-----------------------------------|-----------------------------|---------------|-----------------------------|-----------------------|
| 5.75 | | | | 0.85 | 36.00 | 20.00 |

Demand Set Summary

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|--------------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D5 | 2030-Base+Comm+Dev | AM | ONE HOUR | 07:45 | 09:15 | 15 | ✓ |
| D6 | 2030-Base+Comm+Dev | PM | ONE HOUR | 16:45 | 18:15 | 15 | ✓ |

Analysis Set Details

| ID | Include in report | Network flow scaling factor (%) | Network capacity scaling factor (%) |
|----|-------------------|---------------------------------|-------------------------------------|
| A1 | ✓ | 100.000 | 100.000 |

2030-Base+Comm+Dev, AM

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

| Junction | Name | Junction type | Major road direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|--------------------------|---------------|----------------------|-----------------------|--------------------|--------------|
| A2 | Access to Ravensden Road | T-Junction | Two-way | | 0.50 | A |

Junction Network Options

| Driving side | Lighting |
|--------------|----------------|
| Left | Normal/unknown |

Arms

Arms

| Arm | Name | Description | Arm type |
|-----|------------------|-------------|----------|
| A | Ravensden Rd (N) | | Major |
| B | Access | | Minor |
| C | Ravensden Rd (N) | | Major |

Major Arm Geometry

| Arm | Width of carriageway (m) | Has kerbed central reserve | Has right turn bay | Visibility for right turn (m) | Blocks? | Blocking queue (PCU) |
|-----|--------------------------|----------------------------|--------------------|-------------------------------|---------|----------------------|
| C | 6.00 | | | 125.0 | ✓ | 0.00 |

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

| Arm | Minor arm type | Width at give-way (m) | Width at 5m (m) | Width at 10m (m) | Width at 15m (m) | Width at 20m (m) | Estimate flare length | Flare length (PCU) | Visibility to left (m) | Visibility to right (m) |
|-----|---------------------|-----------------------|-----------------|------------------|------------------|------------------|-----------------------|--------------------|------------------------|-------------------------|
| B | One lane plus flare | 9.25 | 3.33 | 3.00 | 3.00 | 3.00 | | 1.00 | 25 | 40 |

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

| Junction | Stream | Intercept (PCU/hr) | Slope for A-B | Slope for A-C | Slope for C-A | Slope for C-B |
|----------|--------|--------------------|---------------|---------------|---------------|---------------|
| A2 | B-A | 569 | 0.104 | 0.262 | 0.165 | 0.374 |
| A2 | B-C | 679 | 0.104 | 0.263 | - | - |
| A2 | C-B | 646 | 0.250 | 0.250 | - | - |

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Demand Set Details

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |

Summary of junction performance

| | AM | | | | PM | | | |
|---------------------------|-------------|-----------|------|-----|-------------|-----------|------|-----|
| | Queue (PCU) | Delay (s) | RFC | LOS | Queue (PCU) | Delay (s) | RFC | LOS |
| 2019-Base | | | | | | | | |
| Arm A | 1.0 | 7.53 | 0.50 | A | 0.3 | 4.01 | 0.20 | A |
| Arm B | 1.2 | 5.66 | 0.55 | A | 1.9 | 6.99 | 0.65 | A |
| Arm C | 0.4 | 3.89 | 0.28 | A | 0.4 | 4.12 | 0.30 | A |
| Arm D | 1.3 | 5.53 | 0.56 | A | 0.5 | 3.64 | 0.33 | A |
| 2030-Base+Comm | | | | | | | | |
| Arm A | 1.6 | 10.40 | 0.61 | B | 0.3 | 4.40 | 0.25 | A |
| Arm B | 1.7 | 7.16 | 0.63 | A | 3.2 | 10.46 | 0.76 | B |
| Arm C | 0.5 | 4.39 | 0.33 | A | 0.6 | 4.82 | 0.36 | A |
| Arm D | 1.9 | 7.02 | 0.65 | A | 0.6 | 4.10 | 0.39 | A |
| 2030-Base+Comm+Dev | | | | | | | | |
| Arm A | 4.9 | 24.60 | 0.84 | C | 0.4 | 4.78 | 0.31 | A |
| Arm B | 2.2 | 8.83 | 0.69 | A | 4.3 | 13.46 | 0.81 | B |
| Arm C | 0.6 | 4.78 | 0.36 | A | 0.7 | 5.44 | 0.42 | A |
| Arm D | 2.1 | 7.70 | 0.67 | A | 0.8 | 4.61 | 0.44 | A |

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

| Junction | Name | Junction type | Use circulating lanes | Arm order | Junction Delay (s) | Junction LOS |
|----------|---|---------------------|-----------------------|------------|--------------------|--------------|
| 1 | J2 Hookhams Lane / Norse Road / Church Lane / Wentworth Drive | Standard Roundabout | | A, B, C, D | 5.72 | A |

Junction Network Options

| Driving side | Lighting |
|--------------|----------------|
| Left | Normal/unknown |

Arms

Arms

| Arm | Name | Description |
|-----|--------------|-------------|
| A | Hookhams Ln | |
| B | Norse Rd | |
| C | Church Ln | |
| D | Wentworth Rd | |

Roundabout Geometry

| Arm | V - Approach road half-width (m) | E - Entry width (m) | I' - Effective flare length (m) | R - Entry radius (m) | D - Inscribed circle diameter (m) | PHI - Conflict (entry) angle (deg) | Exit only |
|-----|----------------------------------|---------------------|---------------------------------|----------------------|-----------------------------------|------------------------------------|-----------|
| A | 2.79 | 6.20 | 11.7 | 23.1 | 64.0 | 25.0 | |
| B | 3.04 | 6.13 | 17.5 | 25.0 | 60.2 | 14.0 | |
| C | 3.64 | 6.29 | 26.0 | 26.6 | 61.9 | 31.0 | |
| D | 3.60 | 6.68 | 20.9 | 20.9 | 64.0 | 36.0 | |

Slope / Intercept / Capacity

Roundabout Slope and Intercept used in model

| Arm | Final slope | Final intercept (PCU/hr) |
|-----|-------------|--------------------------|
| A | 0.493 | 1413 |
| B | 0.559 | 1619 |
| C | 0.553 | 1723 |
| D | 0.529 | 1693 |

The slope and intercept shown above include any corrections and adjustments.

Traffic Demand

Demand Set Details

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

2019-Base, AM

Data Errors and Warnings

| Severity | Area | Item | Description |
|----------|-----------------|------|---|
| Warning | Mini-roundabout | | Mini-roundabout appears to have unbalanced flows and may behave like a priority junction; treat results with caution. See User Guide for details.[Arms A and C have 82% of the total flow for the roundabout for one or more time segments] |

Junction Network

Junctions

| Junction | Name | Junction type | Use circulating lanes | Arm order | Junction Delay (s) | Junction LOS |
|----------|--------------------------|-----------------|-----------------------|-----------|--------------------|--------------|
| 2 | Wentworth Dr / Putnoe Ln | Mini-roundabout | | A, B, C | 14.72 | B |

Junction Network Options

| Driving side | Lighting | Road surface | In London |
|--------------|----------------|----------------|-----------|
| Left | Normal/unknown | Normal/unknown | |

Arms

Arms

| Arm | Name | Description |
|-----|------------------|-------------|
| A | Wentworth Rd (E) | |
| B | Putnoe Rd | |
| C | Wentworth Rd (W) | |

Mini Roundabout Geometry

| Arm | Approach road half-width (m) | Minimum approach road half-width (m) | Entry width (m) | Effective flare length (m) | Distance to next arm (m) | Entry corner kerb line distance (m) | Gradient over 50m (%) | Kerbed central island |
|-----|------------------------------|--------------------------------------|-----------------|----------------------------|--------------------------|-------------------------------------|-----------------------|-----------------------|
| A | 3.65 | 3.65 | 6.24 | 6.4 | 11.28 | 8.12 | 0.0 | |
| B | 3.75 | 3.75 | 6.47 | 1.9 | 12.13 | 7.68 | 0.0 | |
| C | 3.65 | 3.65 | 3.65 | 0.0 | 16.23 | 15.95 | 0.0 | |

Slope / Intercept / Capacity

Roundabout Slope and Intercept used in model

| Arm | Final slope | Final intercept (PCU/hr) |
|-----|-------------|--------------------------|
| A | 0.659 | 1127 |
| B | 0.638 | 923 |
| C | 0.655 | 996 |

The slope and intercept shown above include any corrections and adjustments.

Traffic Demand

Demand Set Details

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |

2019-Base, PM

Data Errors and Warnings

| Severity | Area | Item | Description |
|----------|-----------------|------|---|
| Warning | Mini-roundabout | | Mini-roundabout appears to have unbalanced flows and may behave like a priority junction; treat results with caution. See User Guide for details.[Arms A and C have 83% of the total flow for the roundabout for one or more time segments] |
| Warning | Vehicle Mix | | HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning. |

Junction Network

Junctions

| Junction | Name | Junction type | Use circulating lanes | Arm order | Junction Delay (s) | Junction LOS |
|----------|--------------------------|-----------------|-----------------------|-----------|--------------------|--------------|
| 2 | Wentworth Dr / Putnoe Ln | Mini-roundabout | | A, B, C | 9.49 | A |

Junction Network Options

| Driving side | Lighting | Road surface | In London |
|--------------|----------------|----------------|-----------|
| Left | Normal/unknown | Normal/unknown | |

Traffic Demand

Demand Set Details

Data Errors and Warnings

| Severity | Area | Item | Description |
|----------|-----------------|------|---|
| Warning | Mini-roundabout | | Mini-roundabout appears to have unbalanced flows and may behave like a priority junction; treat results with caution. See User Guide for details.[Arms A and C have 83% of the total flow for the roundabout for one or more time segments] |

Junction Network

| 2030-Base+Comm | | | | | | | | |
| Arm A | 54.9 | 105.29 | 1.05 | F | 108.4 | 187.89 | 1.12 | F |
| Arm B | 5.8 | 1255.58 | 9999999999.00 | F | 11.1 | 2419.04 | 9999999999.00 | F |
| Arm C | 1.2 | 4.48 | 0.53 | A | 1.5 | 5.32 | 0.61 | A |
| Arm D | 5.7 | 17.07 | 0.86 | C | 1.5 | 6.01 | 0.59 | A |
| 2030-Base+Comm+Dev | | | | | | | | |
| Arm A | 60.6 | 114.17 | 1.06 | F | 131.1 | 244.04 | 1.14 | F |
| Arm B | 7.9 | 2301.53 | 9999999999.00 | F | 11.2 | 3807.63 | 9999999999.00 | F |
| Arm C | 1.2 | 4.51 | 0.54 | A | 1.6 | 5.42 | 0.61 | A |
| Arm D | 7.8 | 22.82 | 0.90 | C | 1.5 | 6.21 | 0.60 | A |

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

Data Errors and Warnings

| Severity | Area | Item | Description |
|----------|----------|-----------------------------|--|
| Warning | Geometry | Arm A - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution. |

Junction Network

Junctions

| Junction | Name | Junction type | Use circulating lanes | Arm order | Junction Delay (s) | Junction LOS |
|----------|-------------------|---------------------|-----------------------|------------|--------------------|--------------|
| 3 | St Neots _ Putnoe | Standard Roundabout | | A, B, C, D | 13.87 | B |

Junction Network Options

| Driving side | Lighting |
|--------------|----------------|
| Left | Normal/unknown |

Arms

Arms

| Arm | Name | Description |
|-----|-----------------|-------------|
| A | St Neots Rd | |
| B | Southern Access | |
| C | Goldington Rd | |
| D | Norse Rd | |

Roundabout Geometry

| Arm | V - Approach road half-width (m) | E - Entry width (m) | I' - Effective flare length (m) | R - Entry radius (m) | D - Inscribed circle diameter (m) | PHI - Conflict (entry) angle (deg) | Exit only |
|-----|----------------------------------|---------------------|---------------------------------|----------------------|-----------------------------------|------------------------------------|-----------|
| A | 3.79 | 7.03 | 30.8 | 14.0 | 60.8 | 25.0 | |
| B | 2.00 | 5.39 | 2.0 | 10.0 | 60.8 | 34.0 | |
| C | 7.82 | 7.91 | 0.1 | 14.7 | 60.8 | 34.0 | |
| D | 5.03 | 6.44 | 8.0 | 32.4 | 60.8 | 21.0 | |

Slope / Intercept / Capacity

Roundabout Slope and Intercept used in model

| Arm | Final slope | Final intercept (PCU/hr) |
|-----|-------------|--------------------------|
| A | 0.582 | 1876 |
| B | 0.367 | 717 |
| C | 0.648 | 2302 |
| D | 0.598 | 1887 |

The slope and intercept shown above include any corrections and adjustments.

Traffic Demand

Demand Set Details

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|---------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D1 | 2019-Base | AM | ONE HOUR | 07:45 | 09:15 | 15 | ✓ |

| Vehicle mix varies over turn | Vehicle mix varies over entry | Vehicle mix source | PCU Factor for a HV (PCU) |
|------------------------------|-------------------------------|--------------------|---------------------------|
| ✓ | ✓ | HV Percentages | 2.00 |

Demand overview (Traffic)

| Arm | Linked arm | Profile type | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|--------------|-------------------------|--------------------|
| A | | ONE HOUR | ✓ | 1373 | 100.000 |
| B | | ONE HOUR | ✓ | 9 | 100.000 |
| C | | ONE HOUR | ✓ | 751 | 100.000 |
| D | | ONE HOUR | ✓ | 996 | 100.000 |

Origin-Destination Data

Demand (PCU/hr)

| From | | To | | | |
|------|---|-----|---|-----|-----|

Summary of junction performance

| | AM | | | | PM | | | |
|---------------------------|-------------|-----------|---------------|-----|-------------|-----------|---------------|-----|
| | Queue (PCU) | Delay (s) | RFC | LOS | Queue (PCU) | Delay (s) | RFC | LOS |
| 2030-Base+Comm+Dev | | | | | | | | |
| Arm A | 29.2 | 60.34 | 1.00 | F | 85.5 | 144.00 | 1.08 | F |
| Arm B | 5.6 | 1582.22 | 9999999999.00 | F | 11.2 | 2358.29 | 9999999999.00 | F |
| Arm C | 1.2 | 4.63 | 0.54 | A | 1.7 | 5.68 | 0.62 | A |
| Arm D | 7.8 | 22.82 | 0.90 | C | 1.5 | 6.21 | 0.60 | A |

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Summary of junction performance

| | AM | | | | PM | | | |
|---------------------------|-------------|-----------|------|-----|-------------|-----------|------|-----|
| | Queue (PCU) | Delay (s) | RFC | LOS | Queue (PCU) | Delay (s) | RFC | LOS |
| 2019-Base | | | | | | | | |
| Junction J4-1 - Arm 1-B | 0.4 | 2.06 | 0.28 | A | 0.5 | 2.24 | 0.34 | A |
| Junction J4-1 - Arm 1-C | 0.6 | 2.12 | 0.38 | A | 1.9 | 3.91 | 0.65 | A |
| Junction J4-1 - Arm 1-D | 2.7 | 7.28 | 0.73 | A | 2.4 | 7.63 | 0.71 | A |
| Junction J4-1 - Arm 1-E | 0.3 | 6.59 | 0.26 | A | 0.1 | 6.20 | 0.13 | A |
| Junction J4-2 - Arm 2-A | 0.3 | 3.22 | 0.25 | A | 0.4 | 3.52 | 0.31 | A |
| Junction J4-2 - Arm 2-B | 1.0 | 6.90 | 0.51 | A | 0.5 | 4.59 | 0.35 | A |
| Junction J4-2 - Arm 2-D | 1.1 | 3.09 | 0.52 | A | 1.2 | 3.25 | 0.55 | A |
| 2030-Base+Comm | | | | | | | | |
| Junction J4-1 - Arm 1-B | 0.5 | 2.19 | 0.32 | A | 0.5 | 2.24 | 0.34 | A |
| Junction J4-1 - Arm 1-C | 0.8 | 2.44 | 0.44 | A | 1.9 | 3.91 | 0.65 | A |
| Junction J4-1 - Arm 1-D | 5.3 | 12.81 | 0.84 | B | 2.4 | 7.63 | 0.71 | A |
| Junction J4-1 - Arm 1-E | 0.5 | 8.84 | 0.34 | A | 0.1 | 6.20 | 0.13 | A |
| Junction J4-2 - Arm 2-A | 0.5 | 3.85 | 0.31 | A | 0.7 | 4.55 | 0.40 | A |
| Junction J4-2 - Arm 2-B | 1.8 | 10.82 | 0.65 | B | 0.8 | 5.91 | 0.44 | A |
| Junction J4-2 - Arm 2-D | 1.5 | 3.62 | 0.59 | A | 1.7 | 4.01 | 0.63 | A |
| 2030-Base+Comm+Dev | | | | | | | | |
| Junction J4-1 - Arm 1-B | 0.5 | 2.21 | 0.33 | A | 0.6 | 2.29 | 0.36 | A |
| Junction J4-1 - Arm 1-C | 0.8 | 2.48 | 0.45 | A | 2.1 | 4.28 | 0.68 | A |
| Junction J4-1 - Arm 1-D | 7.0 | 16.52 | 0.88 | C | 2.7 | 8.45 | 0.73 | A |
| Junction J4-1 - Arm 1-E | 0.8 | 11.23 | 0.46 | B | 0.2 | 6.54 | 0.16 | A |
| Junction J4-2 - Arm 2-A | 0.5 | 4.00 | 0.33 | A | 0.7 | 4.69 | 0.41 | A |
| Junction J4-2 - Arm 2-B | 2.0 | 11.72 | 0.67 | B | 0.8 | 6.14 | 0.46 | A |
| Junction J4-2 - Arm 2-D | 1.6 | 3.78 | 0.61 | A | 1.8 | 4.07 | 0.64 | A |

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

| | |

| Description | |

Units

| Distance units | Speed units | Traffic units input | Traffic units results | Flow units | Average delay units | Total delay units | Rate of delay units |
|----------------|-------------|---------------------|-----------------------|------------|---------------------|-------------------|---------------------|
| m | kph | PCU | PCU | perHour | s | -Min | perMin |

Analysis Options

| Vehicle length (m) | Calculate Queue Percentiles | Calculate detailed queueing delay | Calculate residual capacity | RFC Threshold | Average Delay threshold (s) | Queue threshold (PCU) |
|--------------------|-----------------------------|-----------------------------------|-----------------------------|---------------|-----------------------------|-----------------------|
| 5.75 | | | | 0.85 | 36.00 | 20.00 |

Demand Set Summary

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|--------------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D1 | 2019-Base | AM | ONE HOUR | 07:45 | 09:15 | 15 | ✓ |
| D2 | 2019-Base | PM | ONE HOUR | 16:45 | 18:15 | 15 | ✓ |
| D3 | 2030-Base+Comm | AM | ONE HOUR | 07:45 | 09:15 | 15 | ✓ |
| D4 | 2030-Base+Comm | PM | ONE HOUR | 16:45 | 18:15 | 15 | ✓ |
| D5 | 2030-Base+Comm+Dev | AM | ONE HOUR | 07:45 | 09:15 | 15 | ✓ |
| D6 | 2030-Base+Comm+Dev | PM | ONE HOUR | 16:45 | 18:15 | 15 | ✓ |

Analysis Set Details

| ID | Include in report | Network flow scaling factor (%) | Network capacity scaling factor (%) |
|----|-------------------|---------------------------------|-------------------------------------|
| A1 | ✓ | 100.000 | 100.000 |

2019-Base, AM

Data Errors and Warnings

| Severity | Area | Item | Description |
|----------|----------|---|--|
| Warning | Geometry | Junction J4-1 - Arm 1-C - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution. |
| Warning | Geometry | Junction J4-1 - Arm 1-D - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution. |

Junction Network

Junctions

| Junction | Name | Junction type | Use circulating lanes | Arm order | Junction Delay (s) | Junction LOS |
|----------|------------------|---------------------|-----------------------|-------------------------|--------------------|--------------|
| J4-1 | North roundabout | Standard Roundabout | | 1-A, 1-B, 1-C, 1-D, 1-E | 4.50 | A |
| J4-2 | South roundabout | Standard Roundabout | | 2-A, 2-B, 2-C, 2-D | 4.04 | A |

Junction Network Options

| Driving side | Lighting |
|--------------|----------------|
| Left | Normal/unknown |

Arms

Arms

| Junction | Arm | Name | Description |
|----------|-----|---------------------|-------------|
| J4-1 | 1-A | A421 - Exit Only | |
| | 1-B | Water End - Bridge | |
| | 1-C | A421 (S) | |
| | 1-D | A4280 St Neots Road | |
| | 1-E | Water End | |
| J4-2 | 2-A | A421 (N) | |
| | 2-B | St Neots Road | |
| | 2-C | A421 (S) Exit only | |
| | 2-D | Water End | |

Roundabout Geometry

| Junction | Arm | V - Approach road half-width (m) | E - Entry width (m) | I' - Effective flare length (m) | R - Entry radius (m) | D - Inscribed circle diameter (m) | PHI - Conflict (entry) angle (deg) | Exit only |
|----------|-----|----------------------------------|---------------------|---------------------------------|----------------------|-----------------------------------|------------------------------------|-----------|
| J4-1 | 1-A | | | | | | | ✓ |
| | 1-B | 7.28 | 8.84 | 8.8 | 30.0 | 68.8 | 30.0 | |
| | 1-C | 7.53 | 11.85 | 30.3 | 20.4 | 68.8 | 19.0 | |
| | 1-D | 3.85 | 8.01 | 33.5 | 23.2 | 68.8 | 29.0 | |
| | 1-E | 3.38 | 6.52 | 9.1 | 40.3 | 68.8 | 18.0 | |
| J4-2 | 2-A | 7.05 | 8.64 | 9.7 | 39.3 | 49.9 | 27.0 | |
| | 2-B | 3.67 | 9.05 | 15.1 | 40.2 | 49.9 | 31.0 | |
| | 2-C | | | | | | | ✓ |
| | 2-D | 7.31 | 8.12 | 7.2 | 37.6 | 49.9 | 28.0 | |

Slope / Intercept / Capacity

Roundabout Slope and Intercept used in model

| Junction | Arm | Final slope | Final intercept (PCU/hr) |
|----------|-----|-------------|--------------------------|
| J4-1 | 1-A | | |
| | 1-B | 0.650 | 2548 |
| | 1-C | 0.775 | 3305 |
| | 1-D | 0.575 | 2090 |
| | 1-E | 0.507 | 1574 |
| J4-2 | 2-A | 0.777 | 2537 |
| | 2-B | 0.655 | 1913 |
| | 2-C | | |
| | 2-D | 0.763 | 2467 |

The slope and intercept shown above include any corrections and adjustments.

Traffic Demand

Demand Set Details

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|---------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D1 | 2019-Base | AM | ONE HOUR | 07:45 | 09:15 | 15 | ✓ |

| Vehicle mix varies over turn | Vehicle mix varies over entry | Vehicle mix source | PCU Factor for a HV (PCU) |
|------------------------------|-------------------------------|--------------------|---------------------------|
| ✓ | ✓ | HV Percentages | 2.00 |

Demand overview (Traffic)

| Junction | Arm | Linked arm | Profile type | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|----------|-----|------------|--------------|--------------|-------------------------|--------------------|
| J4-1 | 1-A | | | | | |
| | 1-B | | ONE HOUR | ✓ | 625 | 100.000 |
| | 1-C | | ONE HOUR | ✓ | 935 | 100.000 |
| | 1-D | | ONE HOUR | ✓ | 1226 | 100.000 |
| | 1-E | | ONE HOUR | ✓ | 172 | 100.000 |
| J4-2 | 2-A | | ONE HOUR | ✓ | 354 | 100.000 |
| | 2-B | | ONE HOUR | ✓ | 492 | 100.000 |
| | 2-C | | | | | |
| | 2-D | | ONE HOUR | ✓ | 1163 | 100.000 |

Origin-Destination Data

Demand (PCU/hr)

| Junction J4-1 | From | To | | | | |
|---------------|------|-----|-----------|-----------|-----------|-----------|
| | | | 1-A | 1-B | 1-C | 1-D |
| | | 1-A | Exit-only | Exit-only | Exit-only | Exit-only |
| | 1-B | 1 | 0 | 0 | 590 | 34 |
| | 1-C | 0 | 206 | 83 | 593 | 53 |
| | 1-D | 366 | 837 | 0 | 0 | 23 |
| | 1-E | 10 | 120 | 0 | 42 | 0 |

Demand (PCU/hr)

| Junction J4-2 | From | To | | | | |
|---------------|------|-----------|-----------|-----------|-----------|-----|
| | | | 2-A | 2-B | 2-C | 2-D |
| | | 2-A | 0 | 1 | 0 | 353 |
| | 2-B | 0 | 0 | 220 | 272 | |
| | 2-C | Exit-only | Exit-only | Exit-only | Exit-only | |
| | 2-D | 0 | 343 | 820 | 0 | |

Vehicle Mix

Heavy Vehicle Percentages

Junction J4-1

| From | To | | | | |
|------|-----------|-----------|-----------|-----------|-----------|
| | 1-A | 1-B | 1-C | 1-D | 1-E |
| 1-A | Exit-only | Exit-only | Exit-only | Exit-only | Exit-only |
| 1-B | 0 | 0 | 0 | 2 | 0 |
| 1-C | 0 | 0 | 0 | 1 | 0 |
| 1-D | 1 | 1 | 0 | 0 | 8 |
| 1-E | 0 | 1 | 0 | 0 | 0 |

Junction J4-2

Heavy Vehicle Percentages

| From | To | | | |
|------|-----------|-----------|-----------|-----------|
| | 2-A | 2-B | 2-C | 2-D |
| 2-A | 0 | 0 | 0 | 3 |
| 2-B | 0 | 0 | 1 | 1 |
| 2-C | Exit-only | Exit-only | Exit-only | Exit-only |
| 2-D | 0 | 3 | 1 | 0 |

Results

Results Summary for whole modelled period

| Junction | Arm | Max RFC | Max Delay (s) | Max Queue (PCU) | Max LOS | Average Demand (PCU/hr) | Total Junction Arrivals (PCU) |
|----------|-----|---------|---------------|-----------------|---------|-------------------------|-------------------------------|
| J4-1 | 1-A | | | | | | |
| | 1-B | 0.28 | 2.06 | 0.4 | A | 574 | 860 |
| | 1-C | 0.38 | 2.12 | 0.6 | A | 858 | 1287 |
| | 1-D | 0.73 | 7.28 | 2.7 | A | 1125 | 1687 |
| | 1-E | 0.26 | 6.59 | 0.3 | A | 158 | 237 |
| J4-2 | 2-A | 0.25 | 3.22 | 0.3 | A | 325 | 487 |
| | 2-B | 0.51 | 6.90 | 1.0 | A | 451 | 677 |
| | 2-C | | | | | | |
| | 2-D | 0.52 | 3.09 | 1.1 | A | 1067 | 1601 |

Main Results for each time segment

07:45 - 08:00

| Junction | Arm | Total Demand (PCU/hr) | Junction Arrivals (PCU) | Circulating flow (PCU/hr) | Capacity (PCU/hr) | RFC | Throughput (PCU/hr) | Throughput (exit side) (PCU/hr) | Start queue (PCU) | End queue (PCU) | Delay (s) | Unsignalised level of service |
|----------|-----|-----------------------|-------------------------|---------------------------|-------------------|-------|---------------------|---------------------------------|-------------------|-----------------|-----------|-------------------------------|
| J4-1 | 1-A | | | 966 | | | | 283 | | | | |
| | 1-B | 471 | 118 | 94 | 2487 | 0.189 | 470 | 872 | 0.0 | 0.2 | 1.811 | A |
| | 1-C | 704 | 176 | 501 | 2916 | 0.241 | 703 | 62 | 0.0 | 0.3 | 1.634 | A |
| | 1-D | 923 | 231 | 283 | 1927 | 0.479 | 919 | 920 | 0.0 | 0.9 | 3.608 | A |
| | 1-E | 129 | 32 | 1120 | 1006 | 0.129 | 129 | 83 | 0.0 | 0.1 | 4.140 | A |
| J4-2 | 2-A | 267 | 67 | 873 | 1858 | 0.143 | 266 | 0 | 0.0 | 0.2 | 2.327 | A |

2030-Base+Comm, PM

Data Errors and Warnings

| Severity | Area | Item | Description |
|----------|----------|---|--|
| Warning | Geometry | Junction J4-1 - Arm 1-C - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution. |
| Warning | Geometry | Junction J4-1 - Arm 1-D - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution. |

Junction Network

Junctions

| Junction | Name | Junction type | Use circulating lanes | Arm order | Junction Delay (s) | Junction LOS |
|----------|------------------|---------------------|-----------------------|-------------------------|--------------------|--------------|
| J4-1 | North roundabout | Standard Roundabout | | 1-A, 1-B, 1-C, 1-D, 1-E | 4.72 | A |
| J4-2 | South roundabout | Standard Roundabout | | 2-A, 2-B, 2-C, 2-D | 4.48 | A |

Junction Network Options

| Driving side | Lighting |

Data Errors and Warnings

| Severity | Area | Item | Description |
|----------|----------|---|--|
| Warning | Geometry | Junction J4-1 - Arm 1-C - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution. |
| Warning | Geometry | Junction J4-1 - Arm 1-D - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution. |

Junction Network

Junctions

| Junction | Name | Junction type | Use circulating lanes | Arm order | Junction Delay (s) | Junction LOS |
|----------|------------------|---------------------|-----------------------|-------------------------|--------------------|--------------|
| J4-1 | North roundabout | Standard Roundabout | | 1-A, 1-B, 1-C, 1-D, 1-E | 8.85 | A |
| J4-2 | South roundabout | Standard Roundabout | | 2-A, 2-B, 2-C, 2-D | 5.73 | A |

Junction Network Options

| Driving side | Lighting |
|--------------|----------------|
| Left | Normal/unknown |

Traffic Demand

Demand Set Details

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|--------------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D5 | 2030-Base+Comm+Dev | AM | ONE HOUR | 07:45 | 09:15 | 15 | ✓ |

| Vehicle mix varies over turn | Vehicle mix varies over entry | Vehicle mix source | PCU Factor for a HV (PCU) |
|------------------------------|-------------------------------|--------------------|---------------------------|

2030-Base+Comm+Dev, PM

Data Errors and Warnings

| Severity | Area | Item | Description |
|----------|----------|---|--|
| Warning | Geometry | Junction J4-1 - Arm 1-C - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution. |
| Warning | Geometry | Junction J4-1 - Arm 1-D - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution. |

Junction Network

Junctions

| Junction | Name | Junction type | Use circulating lanes | Arm order | Junction Delay (s) | Junction LOS |
|----------|------------------|---------------------|-----------------------|-------------------------|--------------------|--------------|
| J4-1 | North roundabout | Standard Roundabout | | 1-A, 1-B, 1-C, 1-D, 1-E | 5.14 | A |
| J4-2 | South roundabout | Standard Roundabout | | 2-A, 2-B, 2-C, 2-D | 4.59 | A |

Junction Network Options

| Driving side | Lighting |
|--------------|----------------|
| Left | Normal/unknown |

Traffic Demand

Demand Set Details

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|--------------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D6 | 2030-Base+Comm+Dev | PM | ONE HOUR | 16:45 | 18:15 | 15 | ✓ |

| Vehicle mix varies over turn | Vehicle mix varies over entry | Vehicle mix source | PCU Factor for a HV (PCU) |
|------------------------------|-------------------------------|--------------------|---------------------------|
| ✓ | ✓ | HV Percentages | 2.00 |

Demand overview (Traffic)

| Junction | Arm | Linked arm | Profile type | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|----------|-----|------------|--------------|--------------|-------------------------|--------------------|

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

| A1 | ✓ | 100.000 | 100.000 |

2019, AM

Data Errors and Warnings

| Severity | Area | Item | Description |
|----------|-----------------|----------------------------|--|
| Warning | Major arm width | Arm C - Major arm geometry | For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m. |

Junction Network

Junctions

| Junction | Name | Junction type | Major road direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|--|---------------|----------------------|-----------------------|--------------------|--------------|
| J5 | J5: Oldways Rd_Church End_Ravensden Rd | T-Junction | Two-way | | 1.39 | A |

Junction Network Options

| Driving side | Lighting |
|--------------|----------------|
| Left | Normal/unknown |

Arms

Arms

| Arm | Name | Description | Arm type |
|-----|--------------|-------------|----------|
| A | Oldways Rd | | Major |
| B | Church End | | Minor |
| C | Ravensden Rd | | Major |

Major Arm Geometry

| Arm | Width of carriageway (m) | Has kerbed central reserve | Has right turn bay | Visibility for right turn (m) | Blocks? | Blocking queue (PCU) |
|-----|--------------------------|----------------------------|--------------------|-------------------------------|---------|----------------------|
| C | 5.50 | | | 146.0 | ✓ | 0.00 |

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

| Arm | Minor arm type | Lane Width (Left) (m) | Lane Width (Right) (m) | Visibility to left (m) | Visibility to right (m) |
|-----|----------------|-----------------------|------------------------|------------------------|-------------------------|
| B | Two lanes | 2.57 | 2.80 | 74 | 140 |

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

| Junction | Stream | Intercept (PCU/hr) | Slope for A-B | Slope for A-C | Slope for C-A | Slope for C-B |
|----------|--------|--------------------|---------------|---------------|---------------|---------------|
| J5 | B-A | 561 | 0.104 | 0.264 | 0.166 | 0.377 |
| J5 | B-C | 681 | 0.107 | 0.270 | - | - |
| J5 | C-B | 659 | 0.261 | 0.261 | - | - |

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Demand Set Details

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|---------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D1 | 2019 | AM | ONE HOUR | 07:45 | 09:15 | 15 | ✓ |

| Vehicle mix varies over turn | Vehicle mix varies over entry | Vehicle mix source | PCU Factor for a HV (PCU) |
|------------------------------|-------------------------------|--------------------|---------------------------|
| ✓ | ✓ | HV Percentages | 2.00 |

Demand overview (Traffic)

| Arm | Linked arm | Profile type | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|--------------|-------------------------|--------------------|
| A | | ONE HOUR | ✓ | 348 | 100.000 |
| B | | ONE HOUR | ✓ | 66 | 100.000 |
| C | | ONE HOUR | ✓ | 160 | 100.000 |

Origin-Destination Data

Demand (PCU/hr)

| From | To | | | |

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

2019, AM

Data Errors and Warnings

| Severity | Area | Item | Description |
|----------|-------------|------|--|
| Warning | Vehicle Mix | | HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning. |

Junction Network

Junctions

| Junction | Name | Junction type | Major road direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|--------------------|----------------------|-----------------------|--------------------|--------------|
| 1 | untitled | Right-Left Stagger | Two-way | | 96.18 | F |

Junction Network Options

| Driving side | Lighting |
|--------------|----------------|
| Left | Normal/unknown |

Arms

Arms

| Arm | Name | Description | Arm type |
|-----|----------------|-------------|----------|
| A | B660 N | | Major |
| B | Oldways Road | | Minor |
| C | B660 S | | Major |
| D | Thurleigh Road | | Minor |

Major Arm Geometry

| Arm | Width of carriageway (m) | Has kerbed central reserve | Has right turn bay | Visibility for right turn (m) | Blocks? | Blocking queue (PCU) |
|-----|--------------------------|----------------------------|--------------------|-------------------------------|---------|----------------------|
| A | 6.50 | | | 150.0 | ✓ | 0.00 |
| C | 6.50 | | | 150.0 | ✓ | 0.00 |

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

| Arm | Minor arm type | Lane width (m) | Width at give-way (m) | Width at 5m (m) | Width at 10m (m) | Width at 15m (m) | Width at 20m (m) | Estimate flare length | Flare length (PCU) | Visibility to left (m) | Visibility to right (m) |
|-----|---------------------|----------------|-----------------------|-----------------|------------------|------------------|------------------|-----------------------|--------------------|------------------------|-------------------------|
| B | One lane | 2.90 | | | | | | | | 19 | 22 |
| D | One lane plus flare | | 10.00 | 8.90 | 5.90 | 5.07 | 5.07 | ✓ | 3.00 | 0 | 0 |

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

| Junction | Stream | Intercept (PCU/hr) | Slope for A-B | Slope for A-C | Slope for A-D | Slope for B-A | Slope for B-D | Slope for C-A | Slope for C-B | Slope for C-D | Slope for D-B | Slope for D-C |
|----------|--------|--------------------|---------------|---------------|---------------|---------------|---------------|---------------|---------------|---------------|---------------|---------------|
| 1 | A-D | 661 | - | - | - | 0.250 | 0.250 | 0.250 | - | 0.250 | - | - |
| 1 | B-AD | 490 | 0.087 | 0.221 | - | - | - | 0.139 | 0.315 | 0.139 | 0.087 | 0.221 |
| 1 | B-C | 631 | 0.095 | 0.239 | - | - | - | - | - | - | 0.095 | 0.239 |

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Demand Set Details

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |

2030-Background+Committed, AM

Data Errors and Warnings

| Severity | Area | Item | Description |
|----------|-------------|------|--|
| Warning | Vehicle Mix | | HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning. |

2030-Background+Committed+Dev, AM

Data Errors and Warnings

| Severity | Area | Item | Description |
|----------|-------------|------|--|
| Warning | Vehicle Mix | | HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning. |

Land North of Hookhams Lane, Renhold Lane, Bedford

Drawing No. 248-TA11

Road Safety Audit Stage 1

1. Introduction

- 1.1 This report describes a Stage 1 Road Safety Audit carried out on a proposed priority junction at Land North of Hookhams Lane, Renhold, Bedford, on behalf of Martin Andrews Consulting Ltd (Manor Oak Homes). This audit relates to drawing number 248-TA11. The audit was carried out on 9th December 2019 in the offices of TMS Consultancy.
- 1.2 The audit team members were as follows:

Audit Team Leader

Darren Newbold – MSc, BSc (Hons), MCIHT, MSoRSA
Highways England Approved RSA Certificate of Competency
Principal Engineer, TMS Consultancy

Audit Team Member

Richard Cook - BA (Hons)
Graduate Engineer, TMS Consultancy

- 1.3 The audit comprised an examination of the documents listed in **Appendix A**.
- 1.4 The site was visited by the Audit Team on 9th December 2019 at 11.25 am. The weather was fine and dry. Traffic flows were very light. No pedestrian and cycle flows were observed.
- 1.5 The terms of reference of the Road Safety Audit are as described in GG 119 (GG 119 superseded HD 19/15 in November 2018). The team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the design to any other criteria.
- 1.6 All of the problems described in this report are considered by the audit team to require action in order to improve the safety of the scheme and minimise collision occurrence.

- 1.7 A scheme drawing is included in **Appendix B**, where the locations of specific problems are referenced. A location plan of the scheme is also included in this Appendix.
- 1.8 The scheme consists of proposed priority junction access for land at 25 Hookhams Lane, Renhold, Bedford consisting of 400 dwellings and a two-form entry Primary School.
- 1.9 **Road Safety Audit Response Report**

Following the completion of the road safety audit, the design team should prepare a road safety audit response report in collaboration with the Overseeing Organisation.

The response report should incorporate the following:

- **Decision Log** spreadsheet, where each Problem and Recommendation in the Safety Audit report is reiterated
- In the Decision Log, a response should be provided by the Design Team and Overseeing Organisation for each problem raised in the RSA report, together with an agreed action

Further information is provided in **GG 119 Sections 4.11 to 4.19** and **Appendix F** (where a road safety audit response report template is available).

The response report should be produced and finalised within *one month* of the issue of the RSA report. A copy of the response report should be issued to the Safety Audit Team for information.

safer roads for everyone

2. Items resulting from this Stage 1 Audit

2.1 PROBLEM

Location – Hookhams Lane; site access junction

Summary: Potential darkness related vehicle collisions

There is no existing street lighting within the vicinity of the proposed site access at No. 25 Hookhams Lane. Given the introduction of the junction and a significant amount of additional traffic (and new turning manoeuvres), the lack of illumination may increase the potential for darkness related vehicle collisions.

RECOMMENDATION

At the detailed design stage, the site access junction should be illuminated.

2.2 PROBLEM

Location – Hookhams Lane

Summary: Potential trip hazard to pedestrians

There are shops on the south side of Hookhams Lane within the vicinity of the proposed site access junction, which is likely to introduce a pedestrian desire line to and from the development. Pedestrians wishing to cross Hookhams Lane will have to do so via full height kerbs, which may be a potential trip hazard to pedestrians, particularly to those with visual and mobility impairments.

RECOMMENDATION

At the detailed design stage, an uncontrolled pedestrian crossing point with dropped kerbs and tactile paving should be provided across Hookhams Lane adjacent to the site access junction.

Also, at the detailed design stage, an uncontrolled pedestrian crossing should be provided across the site access road adjacent to the junction with Hookhams Lane.

safer roads for everyone

2.3 OTHER ISSUE

There is an existing BT cover and telegraph pole within the footway that will both be located within the proposed junction area. At the detailed design stage, both the service cover and telegraph poles should be appropriately relocated out of the carriageway into the footway.

3. Audit Team Statement

We certify that the terms of reference of the road safety audit are as described in GG 119 (formerly HD 19/15).

Land North of Hookhams Lane, Renhold, Bedford

(Drawing No. 248-T13)

Road Safety Audit Stage 1

1. Introduction

- 1.1 This report describes a Stage 1 Road Safety Audit carried out on a proposed priority junction at Land North of Hookhams Lane, Renhold, Bedford, on behalf of Martin Andrews Consulting Ltd (Manor Oak Homes). This audit relates to drawing number 248-TA13. The audit was carried out on 9th December 2019 in the offices of TMS Consultancy.
- 1.2 The audit team members were as follows:

Audit Team Leader

Darren Newbold – MSc, BSc (Hons), MCIHT, MSoRSA
Highways England Approved RSA Certificate of Competency
Principal Engineer, TMS Consultancy

Audit Team Member

Richard Cook - BA (Hons)
Graduate Engineer, TMS Consultancy

- 1.3 The audit comprised an examination of the documents listed in **Appendix A**.
- 1.4 The site was visited by the Audit Team on 9th December 2019 at 11.25 am. The weather was fine and dry. Traffic flows were very light. No pedestrian and cycle flows were observed.
- 1.5 The terms of reference of the Road Safety Audit are as described in GG 119 (GG 119 superseded HD 19/15 in November 2018). The team has examined and reported only on the road safety implications of the scheme as presented and has not examined or verified the compliance of the design to any other criteria.
- 1.6 All of the problems described in this report are considered by the audit team to require action in order to improve the safety of the scheme and minimise collision occurrence.

- 1.7 A scheme drawing is included in **Appendix B**, where the locations of specific problems are referenced. A location plan of the scheme is also included in this Appendix.
- 1.8 The scheme consists of a proposed access for land at 27 Hookhams Lane, consisting of 14 dwellings. If planning consent is given, the proposed access will be located directly south of another proposed access (TMS Audit No. 15386). This audit assesses both proposed accesses and their proximity to each other.

1.9 Road Safety Audit Response Report

Following the completion of the road safety audit, the design team should prepare a road safety audit response report in collaboration with the Overseeing Organisation.

The response report should incorporate the following:

- **Decision Log** spreadsheet, where each Problem and Recommendation in the Safety Audit report is reiterated
- In the Decision Log, a response should be provided by the Design Team and Overseeing Organisation for each problem raised in the RSA report, together with an agreed action

Further information is provided in **GG 119 Sections 4.11 to 4.19** and **Appendix F** (where a road safety audit response report template is available).

The response report should be produced and finalised within *one month* of the issue of the RSA report. A copy of the response report should be issued to the Safety Audit Team for information.

safer roads for everyone

2. Items resulting from this Stage 1 Audit

2.1 PROBLEM

Location – Hookhams Lane; site access junctions

Summary: Potential vehicle collisions

The two proposed site access junctions are very closely located. Given the proximity, it may be easy for drivers using the junction to misinterpret indicator signals of other approaching vehicles, which in turn may result in shunt, pull-out and turning type vehicle collisions.

RECOMMENDATION

The feasibility of rationalising the two access junctions into one should be investigated, by means of realigning the access road from the development at No. 27 to form a priority (or vehicle crossover) onto the site access road at No. 25.

2.2 PROBLEM

Location – Hookhams Lane; site access junction

Summary: Potential darkness related vehicle collisions

There is no existing street lighting within the vicinity of the proposed site access at No. 25 and No. 27 Hookhams Lane. Given the introduction of the junction and a significant amount of additional traffic (and new turning manoeuvres), the lack of illumination may increase the potential for darkness related vehicle collisions.

RECOMMENDATION

At the detailed design stage, the site access junctions should be illuminated.

2.3 PROBLEM

Location – Hookhams Lane

Summary: Potential trip hazard to pedestrians

There are shops on the south side of Hookhams Lane within the vicinity of the proposed site access junction, which is likely to introduce a pedestrian desire line to and from the development. Pedestrians wishing to cross Hookhams Lane will have to do so via full height kerbs, which may be a potential trip hazard to pedestrians, particularly to those with visual and mobility impairments.

RECOMMENDATION

At the detailed design stage, an uncontrolled pedestrian crossing point with dropped kerbs and tactile paving should be provided across Hookhams Lane adjacent to the site access junction.

Also, at the detailed design stage, an uncontrolled pedestrian crossing should be provided across both site access roads adjacent to the junction with Hookhams Lane.

2.4 PROBLEM

Location – Hookhams Lane; site access at No. 27

Summary: Potential skid hazard to vehicles

There is a metal service cover on Hookhams Lane that will be located along the give way line of the proposed site access junction at No. 27. The metal cover may be a potential skid hazard to vehicles, particularly two wheeled vehicles, making turning manoeuvres at the junction. This issue may be exacerbated during wet or icy conditions.

RECOMMENDATION

If practicable, the service cover should be relocated into the adjacent footway. Alternatively, the metal cover should be treated with a non-slip surface with similar skid resistance to the surrounding carriageway.

safer roads for everyone

2.5 OTHER ISSUE

There is an existing BT cover and telegraph pole within the footway that will both be located within the proposed junction area (No. 25). At the detailed design stage, both the service cover and telegraph poles should be appropriately relocated out of the carriageway into the footway.

3. Audit Team Statement

We certify that the terms of reference of the road safety audit are as described in GG 119 (formerly HD 19/15).
